

# architecture

## Architecture

Auto-populated from an ashlr baseline scan at genome init.  
Edit freely to capture intent and tradeoffs that a scanner cannot see.

### Snapshot

- **Files scanned:** 5000 (truncated)
- **Runtime:** Unknown
- **Runtime notes:** walk: git ls-files
- **Top extensions:** .json (1219), .txt (1185), .png (1040), .md (768), .log (451), .html (138)

### Largest source files

- `_tests/evidence/live-v1.5.1/vfx/asset-motion.js` — 406 LOC
- `_tests/evidence/ally-audit/run-audit.js` — 383 LOC
- `_tests/evidence/suite/html-report/trace/assets/defaultSettingsView-BNmKHKpQ.js` — 264 LOC

### Top-level layout

## Notes

- The scanned snapshot above is auto-populated and may be overwritten by a re-scan. **Do not hand-edit it.**
- The intent-level description — why each top-level directory exists, what it owns, and what crosses its boundary — lives in `vision/architecture.md`. Structural hazards are in `knowledge/discoveries.md` — currently one open (recursive-checkout failure) and one closed (the hardcoded-absolute-root bug, fixed and now guarded by `scripts/audit-hardcoded-paths.sh` as CI Gate 0).
- Scanner caveat: the “Largest source files” list is dominated by `_tests/evidence/`, which is captured Playwright output, not source. Real source lives in `_tools/gen/` (Go), `_tests/tests/` + `_tests/tools/` (JS), and `design-system/` (CSS).
