Shipped releases

Evidence: `git tag` on the umbrella (4 tags) plus `_analysis/CHANGELOG.md`. Tag subjects are quoted from `git log -1 --format='%ci %s' <tag>`.

Tag	Date	Subject
v1.8.0	2026-08-08	apply brand-anchored hybrid tokens to live (crimson M3 palette refinement)
v1.7.2	2026-08-08	chore: bump site pointers — vasic.digital 217d535, milosvasic.ru 9a3d350
v1.7.1	2026-08-08	eliminate hardcoded content — localized footer/blurbs/meta, deterministic © year, Linux latinization; bump all pointers
pre-restyle	2026-08-07	Bump submodules: design-toolkit expansion v2 (13a76eb) + constitution (7819e23) — rollback restore point , not a release

v1.8.0 is present on milosvasic.ru and vasic.digital only; §4 mirroring to the other owned submodules is incomplete (gap G10).

v1.6.0 — bold re-style, both sites

The only release with a narrative entry (`_analysis/CHANGELOG.md`; full detail in `_analysis/RESTYLE-v1.6.0.md`). Each property was generated as two candidates and Candidate A shipped on both:

- **vasic.digital** → “**MACHINA**” — Bricolage Grotesque display, sharp 0-4px corners, whole-page blueprint grid, GPU-only scanline/aurora motion, deep dark red #8f1d2d retained.
- **milosvasic.ru** → “**TERMINAL BRUTALIST**” — uppercase Anton display, 2px ink frames, hard offset print-shadows, engineering-grid texture, crimson #a31e39 retained.

New self-hosted OFL faces (latin + latin-ext, no CDN); Inter and JetBrains Mono unchanged. Verified from `_tests/evidence/restyle/`: **0 serious/critical and 0 total axe violations** on every page/theme, **0 horizontal overflow** on desktop and mobile, milos behaviour intact (hamburger, 15-item language switcher, 15-language download modal, back-to-top), reduced-motion and reduced-transparency fallbacks present.

Rollback restore points recorded at the time: vasic v1.5.0, milos v1.5.2, umbrella pre-restyle. Rejected alternates are parked, not deleted — see `strategies/graveyard.md`.

Note on release cadence

`_analysis/CHANGELOG.md` documents **only** v1.6.0. There is no changelog entry for v1.7.1, v1.7.2 or v1.8.0 — their tag subjects above are the whole record. The submodules/constitution and submodules/superspec changelogs belong to those upstream projects, not to this one.
