Constitution adoption — closing the open gaps

Status: In Progress Generation: 1

Evidence basis. This is not an invented milestone. It is the work item the repository documents at length: docs/constitution-adoption/INVENTORY.md, the “Known open gaps” table in Constitution.md, and the “Honest boundary” section of CLAUDE.md:155-193. Sub-item states are the repository’s own, not a re-assessment.

Where it stands

scripts/verify-all-constitution-rules.sh — last recorded sweep (2026-08-26, constitution HEAD 448981ae): **58 gates, 37 PASS / 21 FAIL / 0 ERROR**, exit 1. All 21 failures are classified in Constitution.md §“Known-excluded gate findings” — 17 propagation gates reporting the same five carriers, plus 4 gates failing inside the constitution submodule’s own tree.

Gap ledger (identifiers are INVENTORY.md’s own)

Gap	State	Note
G1 — consumer governance layer	CLOSED	four carriers at the root
G2 — inheritance pointer	CLOSED	all five open with ## INHERITED FROM
G3 — post-pull validation sweep	PARTIAL	verify-all-constitution-rules.sh exists; verify-governance-cascade.sh does not → OC-3

Gap	State	Note
G4 — active root CI vs §11.4.156	PARTIAL (2026-08-27)	OC-1 done: ci.yml → ci.yml.disabled, gates on a local pre-push hook. OC-2 will not be done : milosvasic.ru/.github/workflows/pages.yml stays ACTIVE — sole publish path for a production site — a documented deviation, not an override . OC-2b: vasic.digital non-compliant at the provider level, no file-level remedy. Will not reach CLOSED .
G5 — §11.4.75 mechanical layers	OPEN	commit wrapper exists (CLAUDE.md:174-181); git hooks do not
G6 — helix-deps.yml	CLOSED	verified 2026-08-27
G7 — propagation to owned submodules	OPEN	staged, unapplied (§102)
G8 — §11.4.65 markdown export mandate	OPEN	no .html/.pdf siblings anywhere
G9 — §11.4.212 README-orphan	OPEN	README.md links to nothing but the CI badge
G10 — §4 tag mirroring	OPEN	v1.8.0 on milosvasic.ru + vasic.digital only
G11 — design-toolkit checked out twice	OPEN	shas matched at capture
G12 — §11.4.109 anti-forgetting layer	OPEN	guard script present in the submodule, wired nowhere

Also open, and not in the gap table: there is **no CONTINUATION.md** at this root (CLAUDE.md:189-190).

Success criteria

G3 → CLOSED: scripts/verify-governance-cascade.sh written, so §11.4.32 step 1 stops being a SKIP-with-reason (OC-3).

G4 → **decided 2026-08-27, then partially reversed the same day.** ci.yml disabled per §11.4.156(B) with the §11.4.75 layer stood up alongside it. ~~or record an explicit override—§11.4.156~~ — that option never existed. pages.yml stays **ACTIVE** by operator directive (production uptime); a **documented deviation, not an override**. G4 is **PARTIAL permanently** and cannot be ticked to CLOSED.

G5 → CLOSED: §11.4.75 git-hook layers installed at this root.

G7 → CLOSED: operator applies the staged carriers per docs/constitution-adoption/propagation/APPLY.md, submodule-first; vas ic.digital/QWEN.md is the one owned carrier the gates flag.

G12 → CLOSED: guard-forbidden-commands.sh wired as a PreTool Use guard.

Sweep exits non-zero **only** on findings classified as known-excluded or upstream.

Explicitly out of scope

Anything requiring a commit inside a submodule working tree, any edit to submodules/superspec or milosvasic.ru/Upstreamable, and the four gate failures that belong upstream in HelixDevelopment/HelixConstitution (§11.4.26).
