Experimental Strategies

Approaches being tested this generation. Each is labelled in-repo as unfinished — none of them is a settled practice yet.

design-toolkit as a deterministic UI-generation layer

design-toolkit/README.md describes a “reusable, license-clean design-capability layer” that combines with OpenDesign to produce non-repeatable UI/UX from a per-project seed. Its own status line says:

“**Status: FIRST INCREMENT — review-ready local scaffold.** ... No remote repos are created yet, no git submodules are added yet, and the generator code is specified but not yet vendored.”

It is checked out here and declared in `helix-deps.yaml`, but nothing in the six CI gates reads it.

The five-agent tooling stack (`scripts/setup-agents-wizard.sh`)

Installs and wires Claude Code, Kimi, Opencode, MiMo Code and Qwen Code with Lumen (+ CodeGraph for Kimi and Qwen) and ashlr / Glyphdown / SpecKit / SuperSpec. Documented across seven files under `docs/setup-agents-wizard/`, with `scripts/rollback-agents-wizard.sh` as the undo path and `scripts/test-setup-agents-wizard.sh` as its test suite.

Deliberately incomplete edges, stated by the wizard itself: MiMo Code has no documented MCP config file, so the wizard prints values instead of inventing a path; project indexing is opt-in behind `WIZARD_INDEX_PROJECT=1`; the Glyphdown `PreToolUse/`

PostToolUse hook is skippable and “fires on EVERY tool call — enable deliberately” (MANUAL-STEPS.md, generated per run and git-ignored).

This genome

.ashlrcode/genome/ was initialised 2026-08-27 (manifest.json, generation 1, milestone “Initial setup”). Its own maintenance contract is in meta/maintenance.md. Treat retrieval quality as the experiment’s success metric; nothing has measured it yet.

Not yet tried, and named as such

- scripts/verify-governance-cascade.sh — required by §11.4.32 step 1, does not exist; the sweep records it as SKIP-with-reason (Constitution.md OC-3).
- A lint proving **zero** non-token colour/space literals across CSS and inline styles — demanded by the OpenDesign adoption plan, not implemented (_tests/GATES.md, residual coverage gaps).
- OpenDesign consumed as an external dependency rather than as generated output (_tests/GATES.md, same section).
