Strategy Graveyard

Failed approaches and why they didn't work.

Semantic-indexing `_tests/evidence/`

- **Tried:** running `lumen index .` over the whole tree, evidence included.
- **Result:** 4,526 tracked evidence files (1,353 json, 1,167 txt, 1,142 png, 515 log) against only 95 real source files in all of `_tests/`. Embedding them consumed roughly **14 of the ~15 hours** the index needed, and searches returned screenshots and run logs instead of answers.
- **Now:** `_tests/evidence/` is listed in `.lumenignore`. Everything else — all source, all submodules, all docs — is still indexed.
Reversible: delete the line and re-run `lumen index ..`
- **Source:** `.lumenignore` header comment.

Recursive submodule checkout

- **Tried:** `submodules: recursive` in CI / `--recursive` locally.
- **Result:** known failure. `milosvasic.ru` embeds `red-elf/Upstreamable`, whose `.gitmodules` is a broken 0-byte gitlink.
- **Now:** init only `vasic.digital` and `milosvasic.ru`, non-recursively. `milosvasic.ru/.github/workflows/pages.yml` sets `submodules: false` for the same reason, and `Upstreamable` is excluded from the Jekyll build via `milosvasic.ru/_config.yml` `exclude:.`
- **Source:** `README.md:34-40`; `.github/workflows/ci.yml` header, deviation (a).

Re-style candidates rejected at v1.6.0

Both sites were generated as two distinct candidates; Candidate A shipped on each. The rejected alternates are **retained as re-applicable drop-ins**, with their fonts already deployed — parked, not deleted:

- vasic.digital — **“VOLTAGE”** (Fraunces serif / frosted glass). Shipped instead: **“MACHINA”**.
- milosvasic.ru — **“LUMINOUS CRIMSON GLASS”** (Fraunces serif / glass). Shipped instead: **“TERMINAL BRUTALIST”**.

Rollback restore points recorded at the time: vasic v1.5.0, milos v1.5.2, umbrella pre-restyle (the tag still exists, 2026-08-07).
