Anti-Patterns

Each entry is a concrete failure this repository has already hit or explicitly forbids, with the file that records it.

Git / submodules

- **git submodule update --init --recursive on this umbrella.** It fails. milosvasic.ru embeds red-elf/Upstreamable, whose own .gitmodules is a broken 0-byte gitlink. Init only what you need, non-recursively: `git submodule update --init vasic.digital milosvasic.ru` (README.md:34-40; same reasoning in the .github/workflows/ci.yml header, deviation (a)).
- **Direct git add / git commit / git push on the main repo.** Forbidden; use the project's commit wrapper (CLAUDE.md:95-96). The wrapper runs `git add .`, so .gitignore must be accurate before invoking it (CLAUDE.md:180-181).
- **Force-push.** Requires explicit per-session authorization *and* a green §9.1.5 post-op gate (CLAUDE.md:97-98).
- **Writing a governance carrier into an owned submodule from the umbrella.** §3 requires the submodule commit to land first; Constitution.md §102 stages drafts instead. A draft must keep its .staged suffix — a file named CLAUDE.md inside docs/.../propagation/ would be counted by the propagation gates as a real carrier and fail them.
- **“Fixing” a third-party repo to make a gate pass.** Constitution.md §103. Four of the five carriers the propagation gates report MISSING are third-party and are known-excluded, not bugs.

Build / scripts

- **Hardcoded absolute paths.** (Occurred; fixed; now machine-enforced.) `_tools/deploy-langs.sh` once set `ROOT` to a literal macOS path under `/Volumes/`, and `_tests/playwright.config.js` carried the same prefix for its two static roots; CI worked around both with a symlink instead of fixing the configs. The

shape of the bug is what makes it worth keeping: `deploy-langs.sh` runs `set -uo pipefail` **without** `-e`, so the failed `cd` was silent and the script went on to commit and push both site submodules from the wrong directory. **Fixed:** `deploy-langs.sh:14` derives `ROOT` from `${BASH_SOURCE[0]}` and line 15 makes the `cd` fatal; `playwright.config.js:7` uses `path.resolve(__dirname, '..')`; the CI symlink is removed; a sweep cleared 33 occurrences across 18 files. **What prevents a relapse:** `scripts/audit-hardcoded-paths.sh` runs as CI Gate 0 and fails the build on any machine-specific absolute root. Derive instead — `$(cd -- "$(dirname -- "${BASH_SOURCE[0]}")/.." && pwd)` in bash, `path.resolve(__dirname, '..')` in CJS, `Path(__file__).resolve().parents[N]` in python; `$HOME`, `~` and `env` overrides are fine. Full history in `knowledge/discoveries.md`.

- **“Re-fixing” a comment that documents a fixed bug.** Several files carry comment-only mentions of the old literal root (`deploy-langs.sh:8`, the `ci.yml` header, the audit script’s own `PATTERN`). The audit strips comment-only lines for exactly this reason: documenting the bug is not the bug.
- **Editing generated site HTML by hand.** The site submodules are outputs of `_tools/gen/`; hand edits are lost on the next regeneration.
- **Faking an artifact when a tool is missing.** `deploy-langs.sh` warns and skips the PDF build when `pandoc/weasyprint` are absent — “never a faked artifact” (`_tools/deploy-langs.sh:46-49`). Gate 5 likewise degrades to a reasoned `SKIP` when `poppler/tesseract` are missing (`README.md:50-52`).

Tooling / indexing

- **Indexing `_tests/evidence/` semantically.** Embedding it cost roughly 14 of the ~15 hours a full index needed and returned screenshots and run logs as search hits. Excluded via `.lumenignore`; everything else is still indexed.
- **codegraph index on an existing database.** It discards the existing DB — the wizard uses `codegraph sync` when `.codegraph/codegraph.db` exists and `codegraph init` when it does not (`docs/setup-agents-wizard/README.md`, step 7).

Reporting

- **Treating the absence of a gate as a pass.** Stated twice, verbatim, in `CLAUDE.md:192-193` and at the end of `Constitution.md`.
- **Recording an undecided contradiction as an “override”.** That would claim an authorization nobody gave (`Constitution.md`, “Open conflicts” preamble).
