

north-star

North Star

Grounding. No file in this repository carries a sentence labelled “mission”, “vision” or “north star”. What follows is assembled from the two self-descriptions that *do* exist — README.md lines 5-8 and the “Project overview” section of CLAUDE.md (lines 107-116, byte-identical in AGENTS.md / QWEN.md / GEMINI.md). Anything not traceable to those is marked **(inferred)**.

What this project is FOR

vasic is the **umbrella monorepo for two personal/portfolio sites and the shared tooling that builds, translates and validates them** (README.md:5, restated verbatim in CLAUDE.md:109-116).

README states the boundary itself, and it is the sharpest statement of intent in the repository:

“Nothing here is a framework — it is the working monorepo: the sites live as git submodules, and everything that generates or checks them lives at the top level.” —
README.md:6-8

The two properties it exists to ship:

Site	Brand	Build model
vasic.digital/	company (#dc3545, design-system/brand-vasic-digital/)	committed static HTML, served as-is, no build step
milosvasic.ru/	personal (#a31e39, design-system/brand-milosvasic/)	Jekyll source; rendered _site/ is git-ignored

Deployment target is GitHub Pages — static file hosting with “no application server, no database, and no runtime state” (`_tests/TEST-TYPES.md`, opening paragraph). That single fact drives most of the architecture and most of the test-coverage decisions.

The end-state the evidence supports

Three commitments are stated repeatedly across `README.md`, `Constitution.md`, `design-system/README.md` and `_tests/TEST-TYPES.md`, and are the closest thing this repository has to an end-state:

1. **Both sites ship in every complete language, from one English source.** `_content/` is English; `_content_<lang>/` holds 14 sibling languages. A language deploys only when *every* source doc has a PASS review verdict (`_tools/deploy-langs.sh:21-25`).
2. **One design system governs every surface** — both sites, both themes, docs and PDFs — with no ad-hoc CSS (`design-system/README.md`, opening paragraph, citing Helix Constitution §11.4.162).
3. **Nothing is claimed green that was not proven green.** Every gate that can pass must also be proven able to *fail*; gates that cannot be proven are recorded as explicit SKIP-with-reason, never as a pass (`_tests/GATES.md`, `CLAUDE.md:88-102`, `Constitution.md` “Known open gaps”).

(inferred) Taken together the repository behaves as a *personal publishing platform with institutional-grade evidence discipline*: the sites are small, the machinery around them is not, and the machinery is the point. This framing is the genome author’s reading, not a repository statement.

What the north star is explicitly NOT

- Not a reusable framework or product — `README.md:6`.
- Not constitution-compliant yet. `CLAUDE.md:155-193` and the `Constitution.md` gap table both state plainly that gaps G4, G5, G7, G8, G9, G10, G11 and G12 are OPEN. Compliance is a destination, not a current state.
