

principles

Design Principles

Every principle below is enforced somewhere in this repository.
The citation is the enforcement point, not a slogan.

Evidence discipline

1. **No bluffing — every PASS carries positive evidence.**
CLAUDE.md:88 (Constitution §11.4). Gate scripts write artifacts under `_tests/evidence/` and the harness verdicts are files, not console text.
2. **Mutation-paired gates.** A gate that cannot be shown to FAIL is not a gate. `_tests/GATES.md` traceability table: each self-validate runs a golden-good (expect PASS) *and* a golden-bad (expect FAIL) and exits 0 only if both hold. CLAUDE.md:89-90 (Constitution §1.1).
3. **SKIP-with-reason instead of silent gaps.** `_tests/TEST-TYPES.md` marks ddos, concurrency, memory and chaos **N/A** with a cited reason rather than omitting them; Constitution.md OC-3 records a missing verifier as an explicit SKIP that never counts as a pass.
4. **No guessing language.** likely, probably, maybe, seems, appears are forbidden when reporting causes — CLAUDE.md:91-92 (§11.4.6).
5. **State the gap rather than imply coverage.**
CLAUDE.md:155-193 and the Constitution.md gap table exist solely to say what is *not* done.

Design and output

1. **Tokens only — no ad-hoc CSS.** Every component is styled only from `--od-*` custom properties; `components-extended.css` declares no `:root` at all so it inherits whichever brand loaded it (`design-system/README.md`).
2. **Both themes, always.** Dark is defined in BOTH `:root[data-theme="dark"]` and `@media (prefers-color-scheme: dark)` (`design-system/README.md`).

3. **WCAG 2.2 AA on rendered pixels**, asserted by axe-core in a real browser, not by static inspection (`_tests/tests/ally.spec.js`).
4. **Self-hosted assets, no CDN**. Fonts are OFL 1.1 .woff2 under `design-system/fonts/`; icons are a local SVG sprite.
5. **Deterministic, reproducible builds**. The footer © year is pinned via `-ldflags -X main.buildYear` from `SOURCE_DATE_EPOCH` → last commit year → now; `build-pdfs.sh` pins `SOURCE_DATE_EPOCH` from source mtime so unchanged content re-renders byte-identically and stays a git no-op (`_tools/deploy-langs.sh:30-36, :46-49`).

Governance

1. **Inherit by reference; never copy the corpus.**
Constitution.md §101.
2. **Never edit a repository this project does not own.**
Constitution.md §103 — submodules/superspec and milosvasic.ru/Upstreamable are read-only from here, even when a gate reports them MISSING.
3. **Submodule-first propagation, applied by the operator.**
Carriers are staged under `docs/constitution-adoption/propagation/<submodule>/` with a `.staged` suffix and are never written into a submodule working tree from the umbrella (Constitution.md §102).
4. **An unresolved contradiction is not an override.**
Contradictions live in “Open conflicts” (OC-1...OC-3); overrides require an operator decision and a written justification.
Constitution.md, “Overrides” section: **None**.
