

after-tasks

Hook: after_tasks

Runs after `/speckit.tasks` completes. Verifies the task plan covers the specification and checks if superpowers skills can enhance the task breakdown.

Checks

1. **Coverage verification:** Ensure every user story from the spec has corresponding tasks
2. **Superpowers enhancement:** If `writing-plans` skill is detected, suggest re-running `/speckit.superspec.tasks` for enhanced decomposition
3. **TDD readiness:** If constitution requires TDD, verify `[TDD]` markers are present on appropriate tasks
4. **Review gates:** If constitution requires code review, verify `[REVIEW]` markers are present on appropriate tasks

Output

Warnings printed to user if any checks fail. No files modified.
