

before-execute

Hook: before_implement

Runs before `/speckit.implement` starts. Suggests `/speckit.superspec.execute` for TDD discipline and prerequisite verification.

Checks

1. **Prerequisites:** Verify `tasks.md`, `plan.md`, and `spec.md` all exist
2. **TDD enforcement:** If constitution requires TDD and any [TDD] task exists, enforce RED-GREEN-REFACTOR discipline for those tasks
3. **Superpowers detection:** Check for executing-plans, subagent-driven-development, and test-driven-development skills; update `.specify/superpowers.yml`
4. **Progress state:** Read `progress.yml` to determine resume point (if any)

Gate

If any prerequisite is missing, abort with guidance on which command to run first.
