

quickstart

Quickstart: Static Landing Page

Feature: 001-static-landing-page | **Date:** 2026-05-30

Prerequisites

- A modern web browser (Chrome, Firefox, Safari, or Edge — last 2 major versions)
- A text editor for authoring HTML/CSS
- No build tools, no package manager, no server required

Getting Started

1. Create the output directory

```
mkdir -p web
```

2. Author the page

Create `web/index.html` with all HTML markup and inlined CSS in a single `<style>` tag.

3. Preview locally

Open the file directly in a browser:

```
# macOS
```

```
open web/index.html
```

```
# Linux
```

```
xdg-open web/index.html
```

```
# Or simply drag the file into a browser window
```

No HTTP server is required — the page renders identically via `file://` protocol.

4. Validate

- **HTML:** Submit `web/index.html` to [W3C Markup Validation Service](#) — zero errors required
- **Accessibility:** Run axe-core browser extension — zero violations required
- **Responsive:** Test at 320px, 768px, and 1280px viewport widths
- **Print:** Use browser Print Preview to verify ink-friendly output
- **Offline:** Disconnect network, reload page — must render completely

5. Check page weight

```
wc -c web/index.html
# Must be ≤ 65536 bytes (64 KB)
```

File Structure

```
web/
└─ index.html    # The entire deliverable – single file
```

Key Constraints

Constraint	Value	Source
JavaScript	None	Constitution I
External resources	None	Constitution IV
Build tools	None	Constitution Constraints
Max page weight	64 KB	Constitution Quality Standards
Output path	<code>web/index.html</code>	Constitution Constraints
Browser support	Last 2 major versions of Chrome, Firefox, Safari, Edge	Constitution Constraints
