Implementation Plan: [FEATURE]

Branch: [###-feature-name] | **Date:** [DATE] | **Spec:** [link to spec.md] **Input:** Feature specification from specs/[###-feature-name]/spec.md

Summary

[Extract from feature spec: primary requirement + technical approach]

Technical Context

Language/Version: [e.g., Python 3.11, TypeScript 5.x, Rust 1.75 or NEEDS CLARIFICATION] **Primary Dependencies:** [e.g., FastAPI, React, Express or NEEDS CLARIFICATION] **Storage:** [if applicable, e.g., PostgreSQL, localStorage, files or N/A] **Testing:** [e.g., pytest, vitest, cargo test or NEEDS CLARIFICATION] **Target Platform:** [e.g., Linux server, iOS 15+, mobile-first H5 or NEEDS CLARIFICATION] **Project Type:** [e.g., library/cli/web-service/mobile-app or NEEDS CLARIFICATION] **Performance Goals:** [domain-specific targets or NEEDS CLARIFICATION] **Constraints:** [domain-specific constraints or NEEDS CLARIFICATION]

Constitution Check

GATE: Must pass before proceeding. Re-check after design phase.

Principle	Status	Notes
[Principle 1 from constitution]	PASS / NEEDS ATTENTION / VIOLATION	[explanation]

Principle	Status	Notes
[Principle 2 from constitution]	PASS / NEEDS ATTENTION / VIOLATION	[explanation]

Project Structure

Documentation (this feature)

```

specs/[###-feature]/
├─ spec.md           # Feature specification
├─ plan.md           # This file
├─ tasks.md          # Task breakdown (/
speckit.superspec.tasks output)
└─ checklist-*.md    # Generated checklists

```

Source Code (repository root)

```

src/
├─ models/
├─ services/
└─ [feature-specific]/

```

```

tests/
├─ unit/
├─ integration/
└─ contract/

```

Structure Decision: [Document the selected structure and rationale]

Execution Strategy

TDD Requirements

☐

[Component/module]: [Why TDD is needed — e.g., “Complex business logic with many edge cases”]

☐

[Component/module]: [Why TDD is needed]

Parallel Execution Opportunities

☐

- ☐ [Work stream A] and [Work stream B] have no shared files or dependencies
- ☐ [Work stream C] can proceed independently after [prerequisite]

Human Checkpoints

1. After foundational setup — verify project structure and dependencies are correct
2. After each user story — verify behavior matches acceptance scenarios
3. After all stories — run full test suite before polish phase
4. Before merge — final review against spec

Review Gates

- ☐ [API contracts/interfaces]: Review before implementing consumers
- ☐ [Security-sensitive code]: Review before integration
- ☐ [Data model changes]: Review before migration

Complexity Tracking

Fill **ONLY** if Constitution Check has violations that must be justified

Violation	Why Needed	Simpler Alternative Rejected Because
[e.g., extra dependency]	[current need]	[why simpler approach insufficient]
