

plan-template

Implementation Plan: [FEATURE]

Branch: [###-feature-name] | **Date:** [DATE] | **Spec:** [link]

Input: Feature specification from /specs/[###-feature-name]/spec.md

Note: This template is filled in by the /speckit-plan command; its definition describes the execution workflow.

Summary

[Extract from feature spec: primary requirement + technical approach from research]

Technical Context

Language/Version: [e.g., Python 3.11, Swift 5.9, Rust 1.75 or NEEDS CLARIFICATION]

Primary Dependencies: [e.g., FastAPI, UIKit, LLVM or NEEDS CLARIFICATION]

Storage: [if applicable, e.g., PostgreSQL, CoreData, files or N/A]

Testing: [e.g., pytest, XCTest, cargo test or NEEDS CLARIFICATION]

Target Platform: [e.g., Linux server, iOS 15+, WASM or NEEDS CLARIFICATION]

Project Type: [e.g., library/cli/web-service/mobile-app/compiler/desktop-app or NEEDS CLARIFICATION]

Performance Goals: [domain-specific, e.g., 1000 req/s, 10k lines/sec, 60 fps or NEEDS CLARIFICATION]

Constraints: [domain-specific, e.g., <200ms p95, <100MB memory, offline-capable or NEEDS CLARIFICATION]

Scale/Scope: [domain-specific, e.g., 10k users, 1M LOC, 50 screens or NEEDS CLARIFICATION]

Constitution Check

GATE: Must pass before Phase 0 research. Re-check after Phase 1 design.

[Gates determined based on constitution file]

Project Structure

Documentation (this feature)

```
specs/[###-feature]/
├─ plan.md           # This file (/speckit-plan command
output)
├─ research.md       # Phase 0 output (/speckit-plan command)
├─ data-model.md     # Phase 1 output (/speckit-plan command)
├─ quickstart.md     # Phase 1 output (/speckit-plan command)
├─ contracts/        # Phase 1 output (/speckit-plan command)
└─ tasks.md          # Phase 2 output (/speckit-tasks command
- NOT created by /speckit-plan)
```

Source Code (repository root)

```
# [REMOVE IF UNUSED] Option 1: Single project (DEFAULT)
src/
├─ models/
├─ services/
├─ cli/
└─ lib/

tests/
├─ contract/
├─ integration/
└─ unit/

# [REMOVE IF UNUSED] Option 2: Web application (when "frontend" +
"backend" detected)
backend/
├─ src/
```

```
| | | models/
| | | services/
| | | api/
| | └─ tests/

frontend/
| | src/
| | | components/
| | | pages/
| | | services/
| | └─ tests/
```

[REMOVE IF UNUSED] Option 3: Mobile + API (when "iOS/Android" detected)

```
api/
└─ [same as backend above]
```

ios/ or android/

```
└─ [platform-specific structure: feature modules, UI flows, platform tests]
```

Structure Decision: [Document the selected structure and reference the real directories captured above]

Complexity Tracking

Fill ONLY if Constitution Check has violations that must be justified

Violation	Why Needed	Simpler Alternative Rejected Because
[e.g., 4th project]	[current need]	[why 3 projects insufficient]
[e.g., Repository pattern]	[specific problem]	[why direct DB access insufficient]
