

DESIGN-SPEC

Dual-Site Rebuild — Design & Architecture Spec

SUPERSEDED (2026-08-10). This 2026-06-17 spec predates the OpenDesign mandate (§11.4.162) and the Go-generator rebuild. Its “Current State” section below describes the **obsolete** pre-rebuild stack (hand-authored `css/style.css`, `js/translations.js`, per-page HTML) that **no longer exists** — both sites are now generated by `_tools/gen` from `_content/**` + OpenDesign tokens (`design-system/brand-*`). The bespoke CSS-custom-property token system this doc prescribes is now **forbidden** by §11.4.162. This document is retained for historical context only; the governing plan is [OPENDESIGN-ADOPTION-PLAN.md](#), which supersedes it. Do not treat anything below as the current architecture.

Date: 2026-06-17 **Author:** Milos Vasic (`milos85vasic`) + Claude Code **Scope:** Rebuild `milosvasic.ru` (personal CV/portfolio) and `vasic.digital` (company site) into cutting-edge, enterprise-grade, fully responsive, multilingual, dark/light, deeply-tested websites driven by REAL repository data.

Status legend: done · in progress · blocked on data
· todo

1. Current State (verified on disk)

`milosvasic.ru` — personal CV

- **Stack:** Jekyll, `jekyll-theme-cayman` (`_config.yml` = single line). Content lives in `README.md`, rendered as index.
- **Broken:** `_layouts/default.html` contains leftover “**Limo Serbia**” limousine-site metadata (description/keywords). Must be replaced.

- **Assets:** assets/images/milosvasic.png, CV PDFs (Milos_Vasic_CV_EN.pdf, Milos_Vasic_CV_FULL.pdf), Fundamental_Kotlin_3rd_Edition.pdf. Scattered.
- **Cover letter / CVs:** in pages/ (Cover_Letter.md, Cover_Letter.pdf, Milos_Vasic_CL.pdf, Milos_Vasic_CV*.pdf) AND assets/pdf/. Duplicated/scattered.
- **No i18n. No theme toggle. No responsive design beyond Cayman defaults.**
- **Brand color:** #a31e39 (crimson).
- **Remotes:** github (milos85vasic/milosvasic.net.v2), gitflic (milosvasic-net-v-2), plus origin/upstream mixing both.
- **Submodule:** Upstreamable → red-elf/Upstreamable.

vasic.digital — company site

- **Stack:** static HTML/CSS/JS. index.html (749 lines), css/style.css (1000 lines, has light/dark vars), css/logo.css, js/translations.js (29 langs, many sparse), js/language-switcher.js, js/script.js.
- **Sections:** header/nav (+theme toggle, hamburger), hero, about (+stats), services (8 cards), portfolio (19 hand-crafted SVG project cards), contact, footer.
- **Logo:** Assets/Logo.jpeg (543 KB, white background). **MUST KEEP** (per user). LOGO_CONVERSION.md requests a transparent PNG version.
- **Brand color:** red #dc3545 family.
- **Inconsistencies to fix:** “since 2024” (README) vs “since 2023” (footer) vs “© 2025”; unverified claims (e.g., HelixTrack “50,000+ req/s”, “102% parity”, “387 API actions”) — MUST verify against real READMEs or soften.
- **References org Bear-Suite** (not in user’s listed orgs) — flag/confirm.
- **Remote:** single GitHub vasic-digital/vasic-digital.github.io.

2. Data Foundation (running now — 4 background agents)

Artifact	Source	Status
_analysis/ github-vasic- digital. {json,md}	GH org vasic-digital (185)	
_analysis/ github-helix- others.{json,md}	GH HelixDevelopment(30)+Helix- Track(13)+Helix- Flow(1)+Server-Factory(12)	

Artifact	Source	Status
_analysis/ gitlab-all. {json,md}	GL groups (vasic-digital 100 + others)	
_analysis/ research-best- practices.md	Web research (CV/HR/ company/i18n/theming)	

Next: synthesize _analysis/MASTER-inventory.md — deduped (GH↔GL mirrors, forks removed), ranked by size, tagged by org & product family, with a curated “FEATURED” set (biggest/most advanced) and a “MORE” long-tail.

3. Target Architecture

Shared design system (both sites)

- **Tokens:** CSS custom properties for color/space/type/radius/shadow; [data-theme="dark|light"] on <html>.
- **Theme toggle:** respects prefers-color-scheme, persists to localStorage, **inline no-flash script** in <head>.
- **i18n:** vanilla-JS dictionary + data-i18n attributes + language switcher (reuse vasic.digital pattern). hreflang/lang set correctly; RTL handling for ar, fa, he.
- **Responsive:** mobile-first, fluid type (clamp()), CSS grid/flex, tested at 320/375/768/1024/1440.
- **A11y:** WCAG 2.2 AA — semantic landmarks, focus states, contrast, reduced-motion, alt text.
- **Perf:** self-host fonts where feasible, lazy-load images, minimal JS, Lighthouse ≥ 90.

milosvasic.ru (personal CV) — DECISION: stay on Jekyll, custom theme

- Rationale: GitHub Pages builds Jekyll natively; CNAME + Pages already wired. Avoids new build pipeline.
- Replace Cayman with custom _layouts/default.html + _includes/ + custom SCSS (no theme gem). Keep assets/css/style.scss entrypoint.
- Sections (HR/ATS-optimized, order per research): Hero (name, title, photo, CTAs) → Summary → Highlighted projects (from FEATURED data) → Experience → Skills → Author/Books → Education → Contact.
- **Profile photo:** ~/Pictures/Profile.jpg → processed/optimized into assets/images/profile.jpg (responsive sizes), themed framing.

- **Downloads (new requirement):** downloads/ dir with stable direct links:
 - downloads/Milos_Vasic_CV.pdf (ATS-friendly), downloads/Milos_Vasic_CV_EN.pdf, language variants as feasible.
 - downloads/Milos_Vasic_Cover_Letter.pdf.
 - Generated from canonical Markdown via a documented pipeline; linked from the site header/hero.
- i18n + theme toggle added (mirror company pattern). Core langs EN/RU/SR fully; framework for more.

vasic.digital (company) — refresh + polish, keep foundation

- Keep Logo.jpeg (also produce optional transparent PNG per LOGO_CONVERSION.md, but default stays the JPEG logo).
 - Rebuild portfolio from REAL deduped data: client-facing framing (value/outcomes, not internal jargon). Featured grid + filterable “all projects”.
 - Fix date/claim inconsistencies; verify or soften superlatives.
 - Complete/clean i18n for core langs; keep switcher.
 - Enhance design to “cutting-edge enterprise” (motion tasteful, dark/light parity, trust signals, clear CTAs).
-

4. Testing Strategy (in-depth — “rock-solid evidence”)

- **HTML validation:** html-validate / W3C nu validator.
 - **Unit:** Node tests for i18n dictionary completeness (every key present per core lang), theme persistence logic.
 - **E2E / cross-browser / responsive / visual: Playwright** (Chromium, Firefox, WebKit) — nav, theme toggle persists + no FOUC, language switch updates DOM + lang/dir, all links resolve, downloads return 200, responsive layouts at breakpoints, screenshots committed as evidence.
 - **A11y:** axe-core via Playwright.
 - **Perf:** Lighthouse (chrome-devtools MCP) — budget ≥ 90 perf/a11y/best-practices/SEO.
 - **Link/asset integrity:** crawl for 404s; verify PDFs open.
 - All test runs produce committed artifacts (reports, screenshots) under each repo’s tests/ + _analysis/test-evidence/.
-

5. Delivery

- Commit per logical unit. Update submodule Upstreamable if touched.

- Push to ALL upstreams: milosvasic.ru → github + gitflic; vasic.digital → github.
 - Deploy: both are GitHub Pages (push to default branch = deploy). Verify live after push.
-

6. Key Decisions (assumed defaults — autonomous mode; correct if wrong)

1. milosvasic.ru stays **Jekyll** (custom theme), not a rewrite to a JS framework.
 2. Full professional translations for **EN, RU, SR** core; remaining ~26 langs use the existing framework + best-effort (NOT claimed as native-perfect — no bluff).
 3. Company **Logo.jpeg preserved** as primary; transparent PNG optional.
 4. “Major projects to highlight” chosen by **size + advancement signals** from real data (stars, recency, README depth), curated to ~8-12 featured.
 5. Photo source corrected to Profile.jpg (user wrote .jpeg; .jpeg does not exist).
 6. Bear-Suite projects retained in company portfolio (already present) pending confirmation; not in scope for personal CV unless data warrants.
-

7. Open Questions (non-blocking; proceeding with defaults)

- Exact set of “major languages” to FULLY translate vs. framework-only.
- Whether to mirror milosvasic.ru i18n into the Russian-market focus (RU primary?) given .ru domain.
- Confirm Bear-Suite inclusion and any private repos that should/shouldn’t be surfaced publicly.
