

MASTER-inventory

MASTER Inventory — Single Source of Truth for Both Sites

Date: 2026-06-17 · All data verified from gh/glab API (no estimates, no bluff). Sources: github-vasic-digital.json (185), github-helix-others.json (56), gitlab-all.json (189).

1. Totals (verified)

Platform	Scope	Count	Notes
GitHub	vasic-digital	185	53 forks, 4 archived, 20 private; 2 AOSP firmware repos ≈182 GB dominate size
GitHub	HelixDevelopment	30	constitution-driven Go product family
GitHub	Helix-Track	13	JIRA-alternative product line (most clients private)
GitHub	Helix-Flow	1	Platform (AI inference)
GitHub	Server-Factory	12	older Kotlin/Shell infra automation; mostly forks
GitLab	vasic-digital	164	mostly mirrors of

Platform	Scope	Count	Notes
			GitHub; 49 caf-* vendored upstreams
GitLab	HelixDevelopment (helixdevelopment1)	25	mirrors
GitHub total	5 orgs	241	
GitLab total	2 groups	189	Helix-Track / Helix-Flow / Server- Factory do not exist on GitLab

2. Exclusion rules for showcase (why size alone misleads)

- **AOSP firmware mirrors** ATMOSphere-* (~182 GB) — backups of external sources, one archived. EXCLUDE from showcase.
- **caf-* (~49)** — vendored copies of upstream OSS (warp, codex, aider, superset, goose, open-interpreter...). EXCLUDE.
- **Backup mirrors (~14)** — descriptions name a git@github.com: source. EXCLUDE.
- **Archived (8 total)** — EXCLUDE.
- **Private repos** — may be MENTIONED but must NOT be linked publicly (broken links).

3. FEATURED set — public, first-party, advanced (links verified non-404)

Ranked by showcase merit (advancement + activity + role as flagship), size noted but not the sole driver.

#	Project	Org	Lang	Public	Pushed	What it (verified descrip
1	HelixTrack Core	Helix-Track	Go	5★	2026-06-17	“The Op Source J Alternat the Free — enter project/i tracking

#	Project	Org	Lang	 Public	Pushed	What it is (verified description)
2	HelixCode	HelixDevelopment	Go	 1★	2026-06-17	AI coding agent / distributed multi-LLM development platform
3	HelixAgent	HelixDevelopment	Go	 1★	2026-06-16	LLMs as multi-LLM ensemble service
4	HelixTranslate	HelixDevelopment	Go	 	2026-06-17	High-performance enterprise universal translation toolkit; a format/language multiple engines; + HTTP, time We
5	Helix-Flow Platform	Helix-Flow	Go		2026-04-27	“One platform for all your inference needs” - models for any scale, predictable costs
6	LLMsVerifier	vasic-digital	Go		2026-06-16	Benchmark to verify LLMs
7	Catalogizer	vasic-digital	Go		2026-05-03	Advanced protocol collection management system
8	Mail Server Factory	Server-Factory	Shell	 3★	2025-11-12	Automated server deployment (“run your server like a boss”) (<i>for mirror f</i>
9	Panoptic	vasic-digital	Go		2026-06-17	

#	Project	Org	Lang	Public	Pushed	What it (verified descrip
						Automat testing, recordin screensh capture web/des mobile
10	ShareConnect	vasic-digital	Kotlin	1★	2025-12-13	Share downloa URLs to local pro endpoins
11	GrabTube	vasic-digital	Dart		2025-12-04	Tube-ser video downloa (Flutter)
12	Android-Toolkit	vasic-digital	Kotlin		2026-03-24	Common Android abstract impleme

Bench (also public, secondary): Courses-Creator (Go), Asinka (Kotlin, IPC sync), Herald (Go, event fan-out/notifications), HelixPlay (Go, gaming), Core-Framework (Server-Factory, Kotlin).

4. Product families (for navigation grouping)

- **HelixTrack** (Helix-Track org) — Core (Go backend, JIRA alt) + clients: Web/Desktop (TypeScript), Android (Kotlin), iOS (Swift), Aurora, Harmony-OS. **All clients are PRIVATE** → present as “multi-platform clients” WITHOUT public links (or link only the org).
- **HelixDevelopment** — AI/LLM platform family: HelixCode, HelixAgent, HelixTranslate, HelixPlay, helix_cluster, helix_ota (+ ota-* libs), HelixConstitution (governance), plus decoupled libs (LLMProvider, LLMOrchestrator, HelixMemory, HelixSpecifier).
- **Helix-Flow** — Platform (AI inference).
- **Server-Factory** — Mail-Server-Factory, Core-Framework, per-service factories (Kotlin/Shell; older, 2022-2023; many forks).
- **vasic-digital (apps/libs)** — Catalogizer, GrabTube, ShareConnect, Panoptic, Yole, Android-Toolkit, Asinka, LLMsVerifier, Courses-Creator, Herald, Network-

Binder(private), + many small Go microservice libs (auth, cache, database, observability, containers...).

5. FLAGS / corrections for the rebuild

- Current vasic.digital links to **private** Helix-Track clients → fix (404 risk).
- Current site references org **Bear-Suite** (Bear Mail/Messenger) — NOT in user's listed orgs and not found in inventory → confirm or remove.
- Unverified superlatives on current site ("50,000+ req/s", "102% parity with Confluence", "387 API actions") → verify against Core README or soften.
- Date inconsistency: "since 2023/2024" + "© 2025" → standardize.
- Brand color signals: personal #a31e39 crimson; company #dc3545 red. Keep distinct identities; preserve company Logo.jpeg.
- HelixAgent exists in BOTH vasic-digital (private copy) and HelixDevelopment (public) → link the **public** HelixDevelopment one.
