

constitution-compliance

Constitution Conformance Audit — Anti-Bluff Compliance Matrix

Auditor: Independent constitution-conformance auditor (read-only). **Date:** 2026-08-05. **Constitution:** submodules/constitution/Constitution.md (working ruleset §11.4, ~165 mandates). **Work audited:** design-system/, _tools/{od,gen,translate,pdf,portfolio}, _content/ + _content_de/, vasic.digital/ + milosvasic.ru/, milosvasic.ru/downloads/*.pdf, _tests/ (visual, export, tests, evidence/), _analysis/, git state.

Anti-bluff rule applied: no verdict is recorded without a checked basis (file read, artifact inspected, or command run). Every COMPLIANT cites a concrete artifact; every GAP/PARTIAL names the specific defect and remediation.

Headline counts: COMPLIANT 8 · PARTIAL 5 · GAP 5 · N/A 1.

VERIFICATION UPDATE (2026-08-10). Re-checked on disk today; several GAPs recorded 2026-08-05 are now **RESOLVED** (the audit rows below are retained for history — read them together with this note): - **§11.4.161 (sudo) — RESOLVED.** milosvasic.ru/start.sh no longer contains sudo (verified `grep -rn sudo _tools milosvasic.ru vasic.digital` → none). - **§11.4.77 / §11.4.28 (submodule map) — RESOLVED.** .gitmodules now maps all four gitlinks (submodules/constitution, milosvasic.ru, vasic.digital, design-toolkit). - **§11.4.77 (ephemeral engine path) — RESOLVED.** translate-content.sh, translate-pipeline.sh, and the _tools/gen/*.py UI translators now default the engine to the repo-relative committed entrypoint _tools/helixtranslate-container.sh (was /tmp/helixtranslate); guarded by _tools/translate/reproducibility-selftest.sh. - **§1.1 (portfolio gate mutation test) — RESOLVED.** Both _tests/tools/validate.mutation.test.mjs and the harness-style _tools/portfolio/self-validate.sh (golden-good=PASS / golden-bad=FAIL, verdict JSON evidence) now exist. -

§11.4.162 (company-site diagram brand) — RESOLVED.
All 33 design-system/diagrams/*.svg accents tokenized to
var(--od-accent,...); rendered-pixel proof under _tests/
evidence/diagrams/brand-accent-proof/. - **§11.4.107 (axe
coverage) — EXTENDED.** _tests/tests/vasic-digital-
ally.spec.js now scans the company site (home + product +
portfolio), not just milosvasic.ru.

Still open (verified 2026-08-10): the non-EN UI-label
leaks (14 status.*/tier.*/alt.* keys missing from every non-
EN block of ui-i18n.json; German pf.download/prod.tier
untranslated) — these require a **HelixTranslate** run (remote
container host, currently unreachable); per §11.4.140 they
are **not** hand-translated. See MUST-FIX addendum.

GAP / PARTIAL first (sorted by severity)

Mandate	Applies?	Verdict	Evidence / Gap	Re
§11.4.161 rootless containers / no sudo	Yes	GAP	milosvasic.ru/start.sh:3 still runs sudo bundle install && bundle exec jekyll serve. The sudo the task flagged is still present . This is also the one live §12 host-session-safety concern (privilege escalation in a run script). No sudo elsewhere (grep -rn sudo _tools vasic.digital milosvasic.ru returns only this line). .gitmodules maps only submodules/constitution. But git ls-files -s shows three gitlinks (mode 160000): milosvasic.ru, vasic.digital, submodules/constitution. The two site gitlinks have no .gitmodules entry → git submodule status aborts (fatal: no submodule mapping found ... for path 'milosvasic.ru'). A clean clone cannot populate the two sites. Also the translation engine defaults to an ephemeral path: HELIX_BIN=\$ {HELIX_BIN:-/tmp/helixtranslate} (_tools/translate/translate- content.sh:47) — present now	Re use Bu con pat or roo Ad gre for Ad blo mil vas UR .gi git the He the cor (_t hel con poi rep art
§11.4.77 reproducibility from clean clone	Yes	GAP		

Mandate	Applies?	Verdict	Evidence / Gap	Re
§11.4.28 submodules-as-equal-codebase + decoupling	Yes	PARTIAL	(15 MB binary in /tmp) but not in-repo, so re-translation is not reproducible from a clean clone. Constitution submodule is correctly wired (.gitmodules → git@github.com:HelixDevelopment/HelixConstitution.git, SSH). But the two site submodules are gitlinks without mapping (same defect as §11.4.77) — the submodule graph is internally inconsistent. Proven for 2 of 3 gates. Visual oracle (§11.4.170) and export validator (§11.4.168) are genuinely mutation-paired: _tests/visual/self-validate.sh and _tests/export/self-validate.sh each run golden-GOOD (expect PASS / rc 0) and golden-BAD (expect FAIL / rc 1) and assert both; evidence verdict JSONs confirm good=PASS, bad=FAIL with concrete findings (_tests/evidence/harness/{visual,export}/golden-*.verdict.json). Missing: the portfolio data gate _tools/portfolio/validate.mjs has no golden-bad mutation test — nothing feeds it a deliberately-broken portfolio.json (leaked private repo, excluded slug, non-monotonic order) and asserts exit 1. Its immunity is asserted in code comments but never demonstrated.	Sal reg sub pro an clo dec coc
§1.1 false-positive immunity (mutation-paired gates)	Yes	PARTIAL	Present: e2e/feature (_tests/_tests/*-features.spec.js, *.spec.js), accessibility (milosvasic-ru-ally.spec.js, axe-core), i18n completeness (i18n-completeness.spec.js, *-i18n-articles.spec.js), visual-proof (_tests/visual), exported-doc (_tests/export). Playwright reported 51/51 green (commit	Ad por val val kno (ex mu eac cla cap evi
§11.4.169 mandatory test-type set	Yes	PARTIAL	Present: e2e/feature (_tests/_tests/*-features.spec.js, *.spec.js), accessibility (milosvasic-ru-ally.spec.js, axe-core), i18n completeness (i18n-completeness.spec.js, *-i18n-articles.spec.js), visual-proof (_tests/visual), exported-doc (_tests/export). Mandate	Applies?	Verdict	Evidence / Gap	Re
§11.4.162 OpenDesign mandatory tokens, no ad- hoc CSS	Yes	PARTIAL	42440cd). Absent: unit, integration, security, ddos, stress, chaos, concurrency, memory, perf, challenges, helixqa. Many are arguably N/A for two static sites with no server/runtime, but there is no document mapping each required type to a PASS or an explicit justified N/A, so the set is unmet on its face. Strong core: two brand stylesheets share one token foundation with full light + dark overrides and .od-* components (design-system/brand-*/*.css, README.md); sites link the OD CSS (vasic.digital/index.html:9). Ad-hoc CSS remains: inline diagram <svg><style> blocks hardcode hex instead of var(--od-*) — e.g. vasic.digital/products/helixagent.html:68 svg{--ink:#1e293b;--accent:#a31e39;...}; index.html carries a <style> block plus 36 inline style= attributes. Brand mismatch: the company site's diagrams use the personal brand accent #a31e39 (crimson) instead of company red #dc3545. RESOLVED: German was re-translated and re-reviewed to convergence. Current DE review set (_tests/evidence/translate-new/de/*.review.json) is 38 PASS / 0 FAIL / 38 total — no untranslated_leftovers, all sections complete. The files this row originally cited (HelixTrack.md.review.json, vasic-digital.md.review.json) were superseded by the current docs_*/sites_* review-set naming and no longer exist. The independent-review gate correctly flipped from FAIL→PASS after the content	vis val glo anc saf Tok pal * (c dia tok inli fav cla con dia the
DE localization content quality (sink of §11.4.140/141)	Yes	COMPLIANT (resolved 2026-08-07)	is 38 PASS / 0 FAIL / 38 total — no untranslated_leftovers, all sections complete. The files this row originally cited (HelixTrack.md.review.json, vasic-digital.md.review.json) were superseded by the current docs_*/sites_* review-set naming and no longer exist. The independent-review gate correctly flipped from FAIL→PASS after the content	No is c rev

Mandate	Applies?	Verdict	Evidence / Gap	Re
§11.4.142 every change independently reviewed (different model)	Yes	PARTIAL	was fixed (proving it is not rubber-stamping), consistent with the fleet-wide 14×38/38 §11.4.236-review status. Translations are independently reviewed by a different model (see §11.4.141). A “comprehensive review complete (89% PASS)” is referenced in commit 42440cd and _analysis/ reports. But there is no per-change reviewer-model attribution covering the design-system, site markup, and tooling changes — only the translation surface has machine-checkable independent-review artifacts. Verified independently of token values via axe-core, which computes contrast from rendered pixels: _tests/tests/ milosvasic-ru-ally.spec.js runs AxeBuilder and asserts no critical/serious violations (color-contrast is a serious-impact axe rule and is not in the disabled list). README documents a status-badge contrast fix. Limitation: the axe scan targets only the milosvasic.ru homepage (localhost:8082); it does not cover vasic.digital, product/ portfolio pages, or the PDFs. No standalone contrast tool exists (find _tools -iname '*contrast*' empty), so axe is the sole oracle.	Re ind art mo ven tra cla rev Ext sca vas key por (an cor PD cov the cla
§11.4.107 WCAG contrast, verified independently of tokens	Yes	PARTIAL (compliant where run)		

Genuinely COMPLIANT, with proof

Mandate	Applies?	Verdict	Evidence
§11.4.170 device-independent	Yes	COMPLIANT	_tests/visual/visual-oracle.js render HTML in a headless browser, capture PNG + OCR text + a geometry oracle

Mandate	Applies?	Verdict	Evidence
host-rendered pixel proof per screen × state × {light,dark}; token-equality-only forbidden §11.4.168 exported-doc content + textual + visual validation (PDFs)	Yes	COMPLIANT	widget/offscreen-clipped/overlap find theme (light+dark), and derives ver findings — not from token equality. R evidence: <code>_tests/evidence/pages/SUMMA product pages × 2 brands × 2 themes allPass:true)</code>, <code>_tests/evidence/homepag {milos,vasic}/*.verdict.json</code> (findings <code>_tests/evidence/portfolio/*.verdict.j</code> plus manual desktop/mobile/dark PNG <code>_tests/export/validate-pdf.js</code> runs thr families: CONTENT (word count + re phrases via pdftotext), TEXTUAL (no markup/mermaid leak), FULL-VISUAL (pdfimages embedded-image count + rendered pages). Real deliverables pa captured artifacts: <code>_tests/evidence/pdf cv.verdict.json</code> (809 words, phrases “Harness”/“Singidunum”, 4 OCR pag <code>portfolio.verdict.json</code> (867 words, PA <code>cover-letter.verdict.json</code>. Self-validat the validator can fail (golden-bad reje faithfulness, no-leak, and images).
§11.4.69 sink-side positive evidence captured	Yes	COMPLIANT	Rendered PNGs, OCR .txt, oracle ver and PDF verdict JSON are all persiste <code>_tests/evidence/ {homepages,pages,portfolio,pdf,diagra — the observable output of each sink captured, not merely asserted.</code>
§11.4.140 all translation via HelixTranslate + fail-loud	Yes	COMPLIANT	<code>_tools/translate/translate-content.sh</code> translation only through <code>\$HELIX_BIN</code> (l runs under <code>set -euo pipefail</code> (line 39) checks the engine is executable (<code>[-x "\$HELIX_BIN"] die</code> line 64), and die fallback on engine failure (line 136: “fallback, no hand-translation”). Engin present. (Repro caveat tracked under
§11.4.141 independent review by a different model	Yes	COMPLIANT	<code>Translator = mistral/mistral-large-la reviewer = groq/llama-3.3-70b-versati different provider and model. _tools/ review_translation.py</code> docstring mand different provider/model than the one produced the translation.” Review art carry attribution: <code>_tests/evidence/tran de/*.review.json</code> include <code>"_provider": "groq", "_model": "llama-3. versatile".</code> The gate honestly emits F (DE-content GAP), proving it is not rul stamping.

Mandate	Applies?	Verdict	Evidence
§11.4.6 no-guessing / honesty flags / UNVERIFIED markers	Yes	COMPLIANT	Explicit uncertainty markers exist: <code>_a</code> OPENDSIGN-ADOPTION-PLAN.md:157 carries <code>[UNCONFIRMED – verify OpenDesign icon support ...]</code> ; German content includes “Status & honesty notes” sections (flagged by the reviewer); review JSONs record FAIL verdicts and specific issues rather than asserting success.
§11.4.27 no fakes beyond unit	Yes	COMPLIANT	Oracles/validators operate on real rendered output — real headless-browser rendered generated PDFs, real OCR (Tesseract) against mocked sinks. The only synthetic inputs are golden good/bad fixtures, used solely to validate the harness (not to stand in for real behavior).
§11.4.10 credentials — no secrets in VCS	Yes	COMPLIANT	<code>git grep</code> for <code>sk-...</code> , <code>inline API_KEY=...</code> , and <code>key</code> headers over tracked files returns nothing. <code>.gitignore</code> lines 6-16 exclude <code>.env</code> , <code>*.sh</code> , <code>api_keys.sh</code> , <code>**/api_keys.sh</code> , <code>secrets.sh</code> , etc. sourced at runtime from <code>~/api_keys.sh</code> (via <code>translate-content.sh</code>), never stored.

Not applicable / notes

Item	Verdict	Basis
Commit discipline — Conventional Commits	N/A (not mandated)	<code>grep -ni "conventional commit" Constitution.md</code> returns nothing — Conventional Commits is not a constitutional requirement. Observed commits are free-form (“Bump milosvasic.ru submodule...”), which is permissible. The constitution instead mandates a dedicated commit/push script with hook-validation as a named stage and an always-unblocked push (§11.4.234, Lava binding <code>scripts/commit-push-all.sh</code>); no such wrapper exists in this repo (minor process gap, not a Conventional-

Item	Verdict	Basis
GitHub + GitLab baseline releases	UNVERIFIED (offline)	Commits gap). SSH-only transport is satisfied: all remotes are git@github.com:milos85vasic/ vasic.git. git tag is empty locally; release existence on GitHub/GitLab could not be checked read-only offline. Not counted as compliant or gap — flagged as unverifiable from the clone.

MUST-FIX BEFORE DEPLOY

1. **§11.4.161 / §12 — remove sudo from milosvasic.ru/start.sh:3.** Concrete, single-line privilege-escalation violation; add a run-script sudo-grep self-test to keep it out.
2. **§11.4.77 / §11.4.28 — repair the submodule graph.** Add .gitmodules entries for milosvasic.ru and vasic.digital (both are gitlinks with no mapping → git submodule status fatal → clean clone cannot reproduce the sites).
3. **DE content — RESOLVED (2026-08-07).** German was re-translated and re-reviewed to convergence; the current DE review set is **38/38 PASS** (0 FAIL, no untranslated_leftovers). No longer a gap — _content_de is delivered and reviewer-clean.
4. **§1.1 — add the portfolio validator mutation test.** The data gate _tools/portfolio/validate.mjs is the one untested-for-false-positives gate; ship a golden-bad fixture proving it exits 1.
5. **§11.4.77 — de-/tmp the translation engine.** Point HELIX_BIN at a repo-built artifact (via the committed container recipe) so re-translation reproduces from a clean clone.

SHOULD-FIX (quality, not deploy-blocking)

1. §11.4.162 — tokenize inline diagram CSS and remove the 36 inline style= attributes; fix the company site's diagram accent (#a31e39 crimson → #dc3545 red).
2. §11.4.107 — extend the axe contrast scan beyond the milosvasic.ru homepage to vasic.digital and product/portfolio pages.
3. §11.4.169 — publish a test-type applicability matrix (apply/justified-N/A per required type) and add unit tests for the JS/Python tools.

4. §11.4.142 — record an independent-review artifact (reviewer model + verdict) for non-translation change classes.
