

github-vasic-digital

GitHub Organization Inventory: vasic-digital

Generated: 2026-06-17 (account: milos85vasic) **Source data:** github-vasic-digital.json (fetched via `gh repo list vasic-digital --limit 500`)

All figures below are derived directly from the GitHub API via the `gh` CLI. No values are estimated.

Summary

Metric	Value
Total repositories	185
Forks (isFork=true)	53
Archived (isArchived=true)	4
Private (isPrivate=true)	20
Public	165
Repos with <code>caf-</code> prefix (fork/mirror namespace)	49
Repos with <code>ATMOSphere</code> prefix	12
Combined disk usage	197629206 KB (~188 GB)

Note: `size` (KB) is GitHub’s reported `diskUsage` for the repository.

All Repositories — sorted by disk usage (DESC)

TOP 20 DEEP DIVE

Summaries below come from each repo's README (fetched via `gh api repos/vasic-digital/<name>/readme`) and/or its GitHub description. Language breakdown is the top languages by bytes from `gh api .../languages`.

1. ATMOSphere-Android-15-Main — 108,112,932 KB (~103 GB)

Custom Android 15 (API 35, “Baklava”) AOSP firmware built exclusively for the **Orange Pi 5 Max (RK3588)** single-board computer, with 60+ device fixes and optimizations. The repo uses a hybrid storage approach (compressed toolchains/binaries) to fit ~303 GB of build material into GitHub. **Archived**. Languages: none reported by API (binary/archive-heavy repo).

2. ATMOSphere-Android-15 — 82,553,255 KB (~79 GB)

Successor/active line of the same Orange Pi 5 Max Android 15 firmware, now with **135+ applied fixes**. Adds formal governance: inherits the HelixConstitution submodule and project CLAUDE.md/AGENTS.md rule sets, with always-sync README export tooling. Languages: none reported by API.

3. HelixAgent — 1,483,779 KB — Go

A production-ready, AI-powered **ensemble LLM service** that intelligently combines responses from multiple language models for more accurate/reliable outputs. README cites 47+ LLM providers, 13 embedding providers, 35 MCP implementations, and 10 LSP servers; ships with Docker Compose and a monitoring stack. Languages: Go, Shell, HTML, TypeScript.

4. caf-codex — 476,604 KB — Rust (fork)

Fork of OpenAI **Codex** — a lightweight coding agent that runs in your terminal. Languages: Rust, Python, TypeScript, Starlark.

5. caf-cline — 411,954 KB — TypeScript (fork)

Fork of **Cline** (cline.bot) — an autonomous coding agent available as an SDK, IDE extension, or CLI assistant. Languages: TypeScript, JavaScript, Rust, CSS.

6. LLMsVerifier — 388,557 KB — Go

Enterprise-grade platform to **verify, monitor, and optimize LLM performance** across providers. Enforces mandatory model verification (the “Do you see my code?” check) plus existence/latency/streaming/function-calling/vision/embeddings tests; ships

12 provider adapters, real-time health checking with failover, and enterprise LDAP/SSO. Has a DeepWiki page. Languages: Go, HTML, Shell, Python.

7. caf-warp — 276,456 KB — Rust (fork)

Fork of **Warp** (warp.dev) — an agentic development environment built on the terminal. Languages: Rust, Shell, Python, Objective-C.

8. Games — 256,748 KB — Kotlin

“Vasic Digital Games.” **No README and only a one-line description**, so beyond being a Kotlin-based games repository, its specific scope is not documented in-repo. Languages: Kotlin, Python, Shell, Java.

9. caf-codename-goose — 245,586 KB — Rust (fork)

Fork of **Goose** (Block) — an open-source, extensible AI agent that goes beyond suggestions to install, execute, edit, and test with any LLM. Languages: Rust, TypeScript, Shell, CSS.

10. caf-agent-deck — 238,623 KB — Go (fork)

Fork of **Agent Deck** — a terminal session manager / TUI “command center” for AI coding agents (Claude, Gemini, OpenCode, Codex, and more). Languages: Go, TypeScript, JavaScript, Python.

11. caf-superset — 199,162 KB — TypeScript (fork)

Fork of **Superset** (superset.sh) — a code editor for the AI-agents era, designed to run many coding agents (Claude Code, Codex, etc.) in parallel on one machine. Languages: TypeScript, MDX, Shell, CSS.

12. caf-open-interpreter — 196,690 KB — Python (fork)

Fork of **Open Interpreter** — a natural-language interface for computers (lets LLMs run code locally). Languages: Python, PowerShell, Shell, Dockerfile.

13. Courses-Creator — 187,200 KB — Go

A toolkit/system that converts markdown scripts into professional **video courses** with AI enhancements: multi-LLM content enhancement (OpenAI/Anthropic/Ollama), TTS (Bark, SpeechT5) and background music, plus desktop (Electron), mobile (React Native), and web players. Docker-deployed with Prometheus/Grafana. Languages: Go, TypeScript, Shell, HTML.

14. Open-Rag-Material-Android — 173,488 KB — HTML

Documentation/material describing **RAG (retrieval-augmented generation) for Android development**, intended to be consumed by LLM models doing Android coding. Minimal README. Languages: HTML, CSS, JavaScript, Shell.

15. caf-bridle — 168,719 KB — Python (fork)

Fork of **Bridle** (tonsofskills.com) — an open-source marketplace of Claude Code extensions (README/description cite 425 plugins, 2,810 skills, 200 agents) with the ccpi CLI package manager. Languages: Python, TypeScript, Astro, Shell.

16. caf-aider — 140,356 KB — Python (fork)

Fork of **Aider** (aider.chat) — AI pair programming in the terminal. Languages: Python, CSS, Shell, Tree-sitter Query.

17. ATMOSphere-Rhythm-Player — 139,871 KB — Kotlin

Backup mirror of “Project Rhythm,” an Android music player (API 26+, Kotlin). Description states it is an ATMOSphere submodule backup mirror of ATMOSphere1234321/ATMOSphere-Rhythm-Player. Languages: Kotlin, HTML, CSS, JavaScript.

18. caf-qwen-code — 134,828 KB — TypeScript (fork)

Fork of **Qwen Code** — an open-source AI coding agent that lives in the terminal (Qwen-based). Languages: TypeScript, JavaScript, Java, Python.

19. ATMOSphere-SmartTube — 108,618 KB — Java

Backup mirror of **SmartTube** (an ad-free YouTube client for Android TV); README carries the upstream maintainer's security advisory. Description states it is an ATMOSphere submodule backup mirror of ATMOSphere1234321/ATMOSphere-SmartTube. Languages: Java, HTML, C++, Kotlin.

20. caf-gemini-cli — 99,970 KB — TypeScript (fork)

Fork of **Gemini CLI** (geminicli.com) — an open-source AI agent bringing Gemini into the terminal. Languages: TypeScript, JavaScript, Shell, C#.

FLAGS

Forks (GitHub isFork=true) — 53 repos

These are explicitly marked by GitHub as forks of upstream projects. The caf- prefix is this org's convention for forked/ mirrored coding-agent tools (49 of the 53 forks). Non-caf- forks: ffmpeg-kit, Pure_v2_Firmware, qBitConnect, TransmissionConnect, Yole.

Full fork list (alphabetical):

Pure_v2_Firmware, TransmissionConnect, Yole, caf-agent-deck, caf-aiaagent, caf-aichat, caf-aichat-llm-functions, caf-aider, caf-amazon-q, caf-bridle, caf-claude-code, caf-claude-squad, caf-cli-agent, caf-cline, caf-codai, caf-codename-goose, caf-codex, caf-codex-skills, caf-conduit, caf-copilot-cli, caf-crush, caf-deepseek-cli-youkpan, caf-fauxpilot, caf-forge, caf-gemini-cli, caf-get-shit-done, caf-git-mcp, caf-gpt-engineer, caf-gptme, caf-junie, caf-mistral-code, caf-multiagent-coding, caf-nanocoder, caf-noi, caf-octogen, caf-open-interpreter, caf-plandex, caf-postgres-mcp, caf-qwen-code, caf-shai, caf-snow-cli, caf-spec-kit, caf-superset, caf-swe-agent, caf-taskweaver, caf-ui-ux-pro-max, caf-vtcode, caf-warp, caf-x-cmd, caf-xela-cli, caf-zeroshot, ffmpeg-kit, qBitConnect

Backup mirrors (not marked as GitHub forks, but self-declared mirrors) — 11 repos

These repos' descriptions explicitly say "ATMOSphere submodule backup mirror" pointing at an external git@github.com:... source. They are duplicates of repos living under other GitHub accounts (ATMOSphere1234321, milos85vasic, HelixDevelopment), mirrored into this org:

- **HelixConstitution** — ATMOSphere submodule backup mirror — git@github.com:HelixDevelopment/HelixConstitution.git

- **ATMOSphere-SmartTube** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-SmartTube.git`
- **ATMOSphere-Nova-Player** — ATMOSphere submodule backup mirror — `git@github.com:milos85vasic/ATMOSphere-Nova-Player.git`
- **ATMOSphere-VLC-Player** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-VLC-Player.git`
- **ATMOSphere-TorrServe** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-TorrServe.git`
- **ATMOSphere-Strep-Player** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-Strep-Player.git`
- **ATMOSphere-Rhythm-Player** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-Rhythm-Player.git`
- **ATMOSphere-MPV-Player** — ATMOSphere submodule backup mirror — `git@github.com:milos85vasic/ATMOSphere-MPV-Player.git`
- **ATMOSphere-Lampa** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-Lampa.git`
- **ATMOSphere-Gramophone-Player** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-Gramophone-Player.git`
- **ATMOSphere-Presenter** — ATMOSphere submodule backup mirror — `git@github.com:ATMOSphere1234321/ATMOSphere-Presenter.git`

Possible GitLab / external duplicates (by name)

Several first-party repos reference external (non-vasic-digital) sources or sibling projects, which suggests they may duplicate or mirror projects hosted elsewhere (e.g. personal GitHub `milos85vasic`, a GitLab instance, or the `HelixDevelopment` org). Candidates to reconcile against GitLab/other remotes by name:

- **HelixConstitution** — declared a backup mirror of `HelixDevelopment/HelixConstitution`; also referenced as a submodule by the `ATMOSphere-Android-15` repos.
- **HelixAgent** — README clone URL is `dev.helix.agent` (a Helix-branded remote), not the `vasic-digital` GitHub URL; likely has a canonical home on another host.
- **tracker_sdk** — description points to the Lava project at `github.com/milos85vasic/Lava`; likely paired with an externally hosted project.
- **All 11 ATMOSphere-* backup mirrors** (see above) — canonical sources are under `ATMOSphere1234321 / milos85vasic`, not this org.

- **The 53 caf-* / fork repos** — by definition duplicate upstream open-source projects (Codex, Cline, Warp, Goose, Aider, Gemini CLI, Open Interpreter, etc.); not original work.
