

gitlab-all

GitLab Project Inventory

Generated: 2026-06-17 · **Account:** milos85vasic · **Tool:** glab / glab api (real GitLab REST API v4)

1. Scope & group resolution

Five groups were requested. Only two exist as accessible GitLab groups; the other three could not be found as groups, user namespaces, or projects under any accessible namespace.

Requested name	Resolution	Evidence
vasic-digital	EXISTS as group vasic-digital (id 117203414)	groups/vasic-digital/projects returned data
HelixDevelopment	EXISTS as group helixdevelopment1 (id 115733553, display name "HelixDevelopment")	top-level path 404'd; found via namespaces? search=Helix; group has no subgroups
Helix-Track	NOT FOUND	404 as group; empty users? username=; no namespace match; no membership project match for track/Track
Helix-Flow	NOT FOUND	404 as group; empty users? username=; no namespace match; no membership project match for flow/Flow
Server-Factory	NOT FOUND	404 as group; empty users? username=; no

Requested name	Resolution	Evidence
		namespace match for Server-Factory/ ServerFactory/ server/factory

The authenticated user is a member of exactly three groups (groups?min_access_level=10): atmosphere1234321, helixdevelopment1, vasic-digital. “Helix-Track”, “Helix-Flow”, and “Server-Factory” appear only as *concepts/keywords* inside existing projects (e.g. vasic-digital/tracker_sdk, helixdevelopment1/PipelineRuntime, helixdevelopment1/ota-telemetry-schema), not as their own groups. atmosphere1234321 was not in the requested scope and is not inventoried here (its content is mirrored into vasic-digital as the ATMOSphere-* projects).

Note: the group projects endpoint silently ignored statistics=true (requires elevated access), so repository_size was fetched per-project via projects/:id?statistics=true (all 189 populated). Primary language fetched via projects/:id/languages.

2. Counts

Group	Projects	Archived
vasic-digital	164	0
HelixDevelopment	25	0
TOTAL	189	0

Total repository size across all 189 projects: **7.87 GB** (8,453,350,399 bytes). No archived projects in either group.

3. All projects by repository size (DESC)

4. Top 15 deep dive

Summaries written from each project's README (fetched via `projects/:id/repository/files/README.md/raw`). All 15 had a `README.md`.

1. **ATMOSphere-Android-15** (vasic-digital, 1678.0 MB, Shell) — Backup mirror of the Android 15 (API 35) AOSP source tree, repackaged for git hosting using a hybrid storage scheme (~15GB source in git, ~20GB of compressed toolchain archives in `.compressed/` extracted by `setup.sh`). Ships helper scripts for compression, phased pushing, and build-env setup. Largest repo in the inventory at ~1.68 GB.
2. **HelixCode** (HelixDevelopment, 1431.6 MB, Go) — Enterprise-grade distributed AI development platform written in Go (`dev.helix.code`, MIT). Provides distributed worker pools over SSH, intelligent task division with checkpointing/rollback, multi-provider LLM integration (Llama.cpp/Ollama/OpenAI), MCP protocol support, and REST/WebSocket/CLI/TUI clients. README marks all 5 implementation phases complete.
3. **HelixAgent** (vasic-digital, 806.1 MB, Go) — Production AI-powered ensemble LLM service in Go that combines responses from 47+ LLM providers (Claude, DeepSeek, Gemini, Mistral, etc.) with dynamic provider selection scored via LLMsVerifier. Features an AI debate/consensus system, intelligent routing, streaming, and 20 extracted modules (auth, storage, RAG, memory, observability) with Prometheus/Grafana/OpenTelemetry monitoring.
4. **LLMsVerifier** (vasic-digital, 517.5 MB, Go) — Enterprise LLM verification/monitoring/optimization platform in Go. Enforces mandatory model verification (the “Do you see my code?” check) across 12 provider adapters, with real-time health monitoring, failover, analytics, LDAP/SSO, SQLCipher encryption, and an (llmsvd) branding-suffix system. Ships Python and JS SDKs and Docker/Kubernetes deployment.
5. **caf-agent-deck** (vasic-digital, 462.3 MB, Go) — Vendored copy of asheshgoplani/agent-deck (Go, MIT) — an “AI agent command center” that orchestrates fleets of CLI coding agents

(e.g. Claude Code) via a conductor session, with Telegram/Slack/Discord bridges, watchers/doorbells for external events, and TUI/CLI management.

6. **caf-warp** (vasic-digital, 167.1 MB, Rust) — Vendored copy of warpdotdev/warp — Warp, an agentic development environment born from the terminal (Rust). UI crates are MIT-licensed, the rest AGPLv3. Supports built-in and bring-your-own CLI coding agents.
7. **caf-bridle** (vasic-digital, 166.5 MB, Python) — Vendored copy of jeremylongshore/claude-code-plugins-plus-skills (“Tons of Skills”) — a validated Claude Code plugins/skills marketplace catalog (430+ plugins, 2,700+ skills) with a CLI (ccpi), spec validator, and grading rubric.
8. **caf-superset** (vasic-digital, 152.7 MB, TypeScript) — Vendored copy of superset-sh/superset (TypeScript) — “the code editor for AI agents” that orchestrates swarms of CLI coding agents (Claude Code, Codex, etc.) in parallel across isolated git worktrees, with a built-in terminal, diff viewer, and editor handoff.
9. **ATMOSphere-Rhythm-Player** (vasic-digital, 140.7 MB, Kotlin) — Backup mirror of cromaguy/Rhythm (Kotlin, GPLv3) — a Material 3 Expressive Android music player built on Media3 ExoPlayer with bit-perfect/Dolby Atmos playback, synced lyrics, a 10-band EQ, and FOSS/privacy focus. Mirrored as an ATMOSphere submodule.
10. **HelixConstitution** (vasic-digital, 139.1 MB, HTML) — The universal, project-agnostic engineering “constitution” (rules/conventions) shared as a git submodule by every Helix project. Defines a three-layer override model (base/project/subdir), anti-bluff covenant, data/host safety, commit discipline, and a 142-repo submodule catalogue. Pushed to multiple upstreams (GitHub/GitLab/GitFlic/GitVerse).
11. **caf-aider** (vasic-digital, 137.0 MB, Python) — Vendored copy of Aider-AI/aider (Python) — AI pair-programming in the terminal that works with most LLMs (Claude, DeepSeek, GPT, local models), maps the codebase, supports 100+ languages, and auto-commits changes with git integration.
12. **caf-codex** (vasic-digital, 132.4 MB, Rust) — Vendored copy of openai/codex (Rust, Apache-2.0) — OpenAI’s Codex CLI coding agent that runs locally, installable via curl/npm/Homebrew, with IDE integrations and ChatGPT-plan or API-key auth.
13. **caf-codename-goose** (vasic-digital, 109.5 MB, Rust) — Vendored copy of block/goose (Rust, Apache-2.0) — “codename goose”, a local, extensible, open-source on-machine AI agent

that automates engineering tasks end-to-end (builds projects, writes/executes code, debugs, orchestrates workflows) and works with any LLM via MCP.

14. **ATMOSphere-SmartTube** (vasic-digital, 105.9 MB, Java) — Backup mirror of yuliskov/SmartTube (Java) — a free, open-source media client for Android TVs/TV boxes with SponsorBlock, 8K/60fps/HDR support, and no Google-Services requirement. README carries an upstream security advisory about a compromised build environment.
15. **caf-open-interpreter** (vasic-digital, 97.6 MB, Python) — Vendored copy of OpenInterpreter/open-interpreter (Python, AGPL) — lets LLMs run code (Python/JS/Shell) locally through a ChatGPT-like terminal interface, providing a natural-language interface to the computer with user approval before execution.

5. GitHub overlap (likely mirrors / vendored duplicates)

Two distinct duplication patterns were found, totalling **63 of 189 projects (~33%)** that are very likely dedup candidates:

5a. caf-* vendored upstream copies (49 projects)

Every project whose name starts with caf- is a vendored copy of a well-known upstream GitHub project (confirmed by READMEs pointing at the upstream repos). Examples verified from READMEs: caf-warp → github.com/warpcdotdev/warp; caf-codex → github.com/openai/codex; caf-aider → github.com/Aider-AI/aider; caf-superset → github.com/superset-sh/superset; caf-codename-goose → github.com/block/goose; caf-open-interpreter → github.com/OpenInterpreter/open-interpreter; caf-bridle → github.com/jeremylongshore/claude-code-plugins-plus-skills; caf-agent-deck → github.com/asheshgoplani/agent-deck. Full caf-* list:

caf-agent-deck, caf-aiagent, caf-aichat, caf-aichat-llm-functions, caf-aider, caf-amazon-q, caf-bridle, caf-claude-code, caf-claude-squad, caf-cli-agent, caf-cline, caf-codai, caf-codename-goose, caf-codex, caf-codex-skills, caf-conduit, caf-copilot-cli, caf-crush, caf-deepseek-cli, caf-deepseek-cli-youkpan, caf-fauxpilot, caf-forge, caf-gemini-cli, caf-get-shit-done, caf-git-mcp, caf-gpt-engineer, caf-gptme, caf-junie, caf-mistral-code, caf-multiagent-coding, caf-nanocoder, caf-noi, caf-octogen, caf-open-interpreter, caf-plandex, caf-postgres-mcp, caf-qwen-code, caf-shai, caf-snow-cli, caf-spec-kit, caf-superset, caf-swe-agent, caf-taskweaver, caf-ui-ux-pro-max, caf-vtcode, caf-warp, caf-x-cmd, caf-xela-cli, caf-zeroshot

5b. Explicit GitHub backup mirrors (14 projects)

These projects' GitLab descriptions explicitly state they are backup mirrors of a GitHub repo (git@github.com:...):

group	name	mirrors (from description)
vasic-digital	ATMOSphere-Android-15	ATMOSphere main repo backup mirror
vasic-digital	HelixConstitution	ATMOSphere submodule backup mirror — git@github.com:HelixDevelopment/ HelixConstitution.git
vasic-digital	ATMOSphere-VLC-Player	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ ATMOSphere-VLC-Playe
vasic-digital	ATMOSphere-TorrServe	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ ATMOSphere-TorrServe
vasic-digital	ATMOSphere-Strep-Player	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ ATMOSphere-Strep-Pla
vasic-digital	ATMOSphere-SmartTube	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ ATMOSphere-SmartTube
vasic-digital	ATMOSphere-Rhythm-Player	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ ATMOSphere-Rhythm-Pl
vasic-digital	ATMOSphere-Presenter	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ ATMOSphere-Presenter
vasic-digital	ATMOSphere-Nova-Player	ATMOSphere submodule backup mirror — git@github.com:milos85vasic/ ATMOSphere-Nova-Player.gi
vasic-digital	ATMOSphere-MPV-Player	ATMOSphere submodule backup mirror — git@github.com:milos85vasic/ ATMOSphere-MPV-Player.git
vasic-digital	ATMOSphere-Lampa	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ ATMOSphere-Lampa.git

group	name	mirrors (from description)
vasic-digital	ATMOSphere-Gramophone-Player	ATMOSphere submodule backup mirror — git@github.com:ATMOSphere1234321/ATMOSphere-Gramophon
vasic-digital	tracker_sdk	Generic, tracker-agnostic SDK primitives: mirror manager, plugin registry, testing harness
HelixDevelopment	DebateOrchestrator	Debate Orchestrator (GitLab mirror of HelixDevelopment/DebateOrchestrator)

DebateOrchestrator (HelixDevelopment) is described as a GitLab mirror of HelixDevelopment/DebateOrchestrator. The ATMOSphere-* set (11 projects) are backup mirrors of GitHub repos under the ATMOSphere1234321 / milos85vasic orgs.
