

DEFECT-MATRIX

Deep Live-Interaction Sweep — Pre-Deploy Gate

Driver: Playwright 1.61 (Chromium $\approx$ Yandex). Read-only. Built output served locally (milosvasic.ru/_site @ :8082, vasic.digital @ :8401). Viewports: tablet 1024 $\times$ 768, mobile 390 $\times$ 844, desktop 1440 $\times$ 900. Raw data: results.json (385 assertions). Evidence PNGs in this folder.

Verdict: PASS with ONE real defect

- **314 PASS / 385** on first machine pass.
- After manual verification of every non-PASS row, **only ONE is a genuine user-facing defect** (milos mobile nav). The rest are harness selector mismatches or by-design.

Genuine defect (should be addressed)

#	Sev	Site	Pages	Viewport	Element	Selector
1	MEDIUM	milosvasic.ru	ALL (home, portfolio, all products)	mobile 390 only	Primary nav links (Work/ Experience/ Skills/ Contact)	nav.nav .nav-links a

#	Sev	Site	Pages	Viewport	Element	Selector
---	-----	------	-------	----------	---------	----------

Non-PASS rows that were verified NOT defects (false positives / by-design)

Reported	Rows	Reality (verified)
vasic Lang switcher "BROKEN — lang unchanged=en"	15	FALSE POSITIVE. Harness clicked the first menu item, which is English (current) → no change. Manual probe: selecting Беларуская flips <html lang=en→be in place (od-i18n.js applyDict). Switcher works on every vasic page/viewport.
vasic Footer links "MISSING"	18	BY DESIGN. <footer class="od-footer"> is intentionally text-only ("© 2026 Vasic Digital — built on the OpenDesign system.") with no <a>. milos footer has links (15 PASS).
vasic portfolio Theme toggle + Brand "MISSING"	6	HARNESS SELECTOR MISS. Portfolio uses #pf-theme-toggle (not #od-theme-toggle) and brand as a.od-nav__link (not a.od-brand). Probe: theme flips null→dark;

Reported	Rows	Reality (verified)
milos article page Theme/ Lang/Back-to- top/Footer/ Brand "MISSING"	15	brand href=../index.html → home. Both functional. NOT A NAV TARGET. /articles/en/ *.html are bare HTML fragments (no site chrome, no <title>) injected into the on-page article modal. milos home has 0 direct <a href*="/articles/"> links — they are never loaded as standalone pages. The real "doc" surface is the CV/Cover-Letter/Portfolio download modal, which PASSED.

Everything that PASSED (verified working, both sites unless noted)

Check	Result
Header nav links (desktop + tablet, both sites)	76 PASS — hash links scroll to existing target section; subpage / #work etc. navigate to home and land on the section; vasic cross-page links navigate.
Brand / logo → home	27 PASS (+6 selector-miss that are functional).
Theme toggle (data-theme flip + persists across reload)	27 PASS (+6 selector-miss functional; milos article n/a).
Language switcher	milos 15 PASS (flips <html lang>); vasic verified functional (see above).
Download (milos CV/CL/Portfolio modal opens; PDFs resolve)	12 PASS — modal opens, referenced PDFs return HTTP 200; vasic Portfolio_EN.pdf 200.
Read-more / product-card links	6 PASS — navigate to the product page.
Accordion / disclosure (product pages)	18 PASS — aria-expanded toggles + panel visibility changes.
Back-to-top floating button	30 PASS (hidden at top, appears after scroll, click → scrolly 0, name "Back to top"); 3 n/a (short article fragment).
Footer links	milos 15 PASS all valid href; vasic text-only by design.

Check	Result
Images (logo, portrait, diagrams) naturalWidth>0	33/33 PASS — no broken images. vasic brand renders the real Assets/Logo.jpeg/logo.webp, not a monogram.
Horizontal overflow (tablet + mobile)	22/22 PASS — scrollWidth ≤ innerWidth+1 everywhere.
Console errors / pageerrors	33/33 PASS — clean on every page/viewport.
