

SCAFFOLD-MANIFEST

Design-Toolkit Scaffold — Evidence Manifest

Generated: 2026-08-06 · **Deliverable:** FIRST INCREMENT of the design-capability toolkit, built from `_analysis/design-research/CATALOG.md` + `INCORPORATION-PLAN.md`, as **local files** (no remote repos, no git submodules added, no git commit/push). Non-generator work only — `_tools/gen/`, `_content*`, and the sites are untouched.

See [file-inventory.txt](#) for per-file sha256 + sizes.

1. File tree produced

```
design-toolkit/                                (21 files, 7 dirs, ~109
KB)
├─ README.md                                what it is · OpenDesign
combination · uniqueness philosophy · load out-of-the-box
├─ agents/                                  6 design-specialist agent
recipes (frontmatter: name/description/tools + system prompt)

design-DNA model, all platforms/formats, roadmap

```

All 7 required deliverables present: (1) README, (2) 6 agents, (3) mcp/INSTALL.md, (4) submodules/PLAN.md, (5) knowledge/, (6) qa/, (7) docs/USER-GUIDE.md + docs/MANUAL.md.

2. Fidelity to the research (traceability)

Research item	Where it landed	Faithful?
6 agent recipes (§4 of plan)	agents/*.md — exact 6 names, each with knows/uses/does/guardrail	■
Parametric uniqueness pipeline (§5)	theming-designer.md + docs/MANUAL.md §3 + knowledge/dtcg-tokens.md	■
MCP install set (§2 table)	mcp/INSTALL.md — all 9 core/ingestion + 3 pilots + exclusions	■
Vendored submodules (§3)	submodules/PLAN.md — libs §A, color scales §B, skills §C	■
Knowledge to encode (Category 3)	knowledge/ — 8 sheets, open-licensed only, sources cited	

Research item	Where it landed	Faithful?
§11.4.162 OpenDesign source-of-truth	enforced in README, every agent, MANUAL §3, dtcg-tokens	
Anti-bluff / §11.4.170 proof	design-qa-auditor + qa/ design-qa-testbank.md	

3. License verification performed this build

- **utopia-core** → **ISC** — CONFIRMED (npm registry registry.npmjs.org/utopia-core/latest + package.json, 2026-08-06). Resolves the research’s “verify LICENSE before vendoring” flag. Recorded in submodules/PLAN.md §A and README.md §6.
- All other vendored items retain the CATALOG.md-verified licenses (MIT/Apache-2.0/BSD).
- **Excluded, faithfully carried forward:** Official Figma Dev Mode MCP (paid), 21st.dev Magic MCP (paid/keyed), LottieFiles Creator MCP (hosted), GPL/no-license icon+color MCPs, no-license skill repos, Every Layout/Refactoring UI (paid — concepts only), APCA as a gate (advisory only).

4. Scope compliance (what was NOT touched)

- No remote GitHub/GitLab repos created (explicitly the next checkpoint).
- No git submodules added (commands documented in submodules/PLAN.md, not run).
- No git commit / git push.
- No changes to _tools/gen/, _content*, milosvasic.ru, or vasic.digital.
- New files only under design-toolkit/ and _tests/evidence/design-toolkit/.

5. Explicitly deferred to the NEXT checkpoint

1. Remote repo creation under vasic-digital on **GitHub + GitLab** (gh repo create / glab repo create) — exact commands in submodules/PLAN.md §“Next checkpoint”.

2. Adding the vendored submodules (§A-§C) pinned to reviewed SHAs.
3. Nesting design-toolkit/ under the HelixConstitution submodule and bumping the pointer in vasic.
4. Standing up generators/ as runnable code (design-dna.mjs / gen-tokens.mjs / gen-marks.mjs) and proving OpenDesign ingests the generated DTCG (or filing the upstream PR).
5. Turning qa/design-qa-testbank.md into an executable suite + wiring the CM gates.

All held pending user GO (entangled with the un-pushed §11.4.236 amendment + umbrella push).
