

AUDIT

Vasic Monorepo — Health & Consistency Audit (READ-ONLY)

- **Date:** 2026-08-07
- **Mode:** Read-only. No source edits, commits, pushes, generator or deploy runs. Only git read ops, curl, and this evidence file were produced.
- **Caveat (concurrent deploy):** A `deploy-langs.sh` (v1.6.0 re-style) was **actively running during this audit**. It mutated the `vasic.digital/` and `milosvasic.ru/` submodule working trees and **pushed v1.6.0 tags + advanced main mid-audit** (v1.6.0 tags were absent on the first `ls-remote` pass and present ~minutes later). Findings below rely on **stable** data (remote refs, tags, recorded gitlinks); dynamic/in-flight items are timestamped and labelled.
- **Scope:** umbrella `/Volumes/T7/Projects/vasic`, `vasic.digital`, `milosvasic.ru`, `submodules/constitution`, `design-toolkit`. (`design-system/` is a **tracked subdirectory of the umbrella**, not a submodule — see Loose Ends.)

PASS / FLAG / UNVERIFIED summary

#	Check	Result	Evidence
1	Umbrella remote sync	PASS	branch feat/content-generator HEAD a48554e == origin/refs/heads/feat/content-generator a48554e
1	vasic.digital remote sync	PASS (caught up mid-audit)	local main now d87a1d6 == origin/github/gitlab main d87a1d6. Was e2f85bc (behind) early in audit before deploy advanced it
1			

#	Check	Result	Evidence
	milosvasic.ru remote sync	PASS (caught up mid-audit)	local main now 8324f27 == origin/github/gitlab/gitflic main 8324f27. Was 1f2b605 (behind) early in audit
1	milosvasic.ru origin remote config	FLAG	origin has split fetch/push URLs : fetch=github.com/ milos85vasic/milosvasic.ru, push=gitflic.ru/... and github.com/...net.v2 (two push URLs). Non- standard; verify intentional
1	constitution remote sync	PASS	main 38c9825 == origin/ main 38c9825
1	design-toolkit remote sync	PASS	main 74a037f == origin+gitlab main 74a037f
2	Release/pre-restyle tags present	PASS (w/ flag)	Full matrix below. v1.6.0 pushed to both sites during audit
2	milosvasic.ru gitflic mirror tag parity	FLAG	gitflic is missing v0.9.0-baseline and v1.0.0 tags that github+gitlab carry
3	design-toolkit gitlink reachable	PASS	umbrella records 74a037f = remote main tip & v0.2.1^{ } → reachable, not dangling
3	constitution gitlink reachable	PASS	umbrella records 38c9825 = remote main tip → reachable, not dangling
3	Site submodule pointers current	FLAG (deploy-in-progress)	umbrella still records milosvasic.ru=00794fb (v1.5.1) & vasic.digital=e2f85bc (v1.5.0/pre-restyle); both reachable but stale — sites advanced to v1.6.0, umbrella bump not yet committed
4	Constitution §11.4.236 + §11.4.237	PASS	On origin/ main:Constitution.md: §11.4.236 ×2, §11.4.237 ×4
4	design-toolkit nested in constitution .gitmodules	PASS	origin/main:.gitmodules has [submodule "design- toolkit"] → github.com:vasic-digital/ design-toolkit.git

#	Check	Result	Evidence
5	vasic.digital live	PASS	HTTP 200, 47384 B, server: GitHub.com
5	milosvasic.ru live	PASS	HTTP 200, 38193 B, server: GitHub.com, generator content="Jekyll v4.4.1"
5	Re-style (v1.6.0) live?	UNVERIFIED (expected — deploy in flight)	Both roots last-modified: Fri, 07 Aug 2026 14:50:15 GMT, unchanged before & after the v1.6.0 push → Pages not yet rebuilt with re-style. Not asserted live
6	umbrella secrets .gitignore	PASS	ignores .mcp.json, .env, *.env, .env.*, api_keys.sh, **/api_keys.sh, secrets.sh
6	constitution secrets .gitignore	PASS (minor)	ignores .env/.env.*/*.env (whitelists .env.example). .mcp.json not listed; a tracked plugins/scheduled-work/.mcp.json exists (0 real secrets inside)
6	vasic.digital secrets .gitignore	FLAG	No .gitignore tracked at all — no repo-level secret coverage
6	design-toolkit secrets .gitignore	FLAG	No .gitignore tracked at all — no repo-level secret coverage
6	milosvasic.ru secrets .gitignore	FLAG	.gitignore present but .env line is commented out (# .env); no .mcp.json/api_keys coverage
6	Leaked real secrets (all repos)	PASS	0 real key matches. Only hit = submodules/constitution/scripts/hooks/test_credential_scan_lib.sh (a credential-scanner test fixture , by-design sample patterns). No secret values printed
7	Stale/forgotten uncommitted work	PASS	Only the umbrella tree is dirty, and every change is re-style-related (see Loose Ends). Sites/constitution/design-toolkit trees clean
7	Untracked large files (>5MB)	PASS	None found in umbrella working tree
7		PASS	

#	Check	Result	Evidence
	Detached-HEAD submodules		All submodules on main; umbrella on feat/content-generator (intentional restyle branch)

1. Repos & remotes

Repo	Branch	HEAD (stable)	Remotes (excl. upstream)
umbrella	feat/content-generator	a48554e	origin,github = github.com:milos85vasic/vasic.git
vasic.digital	main	d87a1d6 (post-deploy)	origin,github=github.com:vasic-digital/vasic-digital.github.io.git; gitlab=gitlab.com:milos85vasic/vasic.digital.git
milosvasic.ru	main	8324f27 (post-deploy)	origin fetch=github.com:milos85vasic/milosvasic.ru.git / push=gitflic.ru:...+github.com:...net.v2; github=...net.v2; gitlab=gitlab.com:milos85vasic/milosvasic.ru.git; gitflic=gitflic.ru:milosvasic/milosvasic-net-v-2.git
submodules/constitution	main	38c9825	origin=github.com:HelixDevelopment/HelixConstitution.git
design-toolkit	main	74a037f	origin=github.com:vasic-digital/design-toolkit.git; gitlab=gitlab.com:vasic-digital/design-toolkit.git

No remote out of sync at final measurement. Note: vasic.digital & milosvasic.ru read as *behind remote main* early in the audit; the concurrent deploy advanced the local checkouts to match. .gitmodules (umbrella) declares all four submodules.

2. Tags (per repo → commit)

umbrella: pre-restyle → 8ae909d (annotated; ^{ }=e3228373). No v1.x / no v1.6.0 (umbrella is not release-tagged).

vasic.digital: v0.9.0-baseline=683a717, v1.0.0=ad0563c, v1.1.0=56d7e8e, v1.1.1=41da3ae, v1.2.0=2bb9a8b, v1.3.0=9b4b64b, v1.3.1=8403754, v1.4.0=d6575ba, v1.5.0(→e2f85bc), pre-restyle(→e2f85bc), **v1.6.0=d87a1d6 (pushed during audit).**

milosvasic.ru: v0.9.0-baseline=fae3b24, v1.0.0=c8e06ff, v1.1.0=85e74ac, v1.1.1=97df136, v1.2.0=2e574cf, v1.3.0=e48bc61, v1.3.1=679e66d, v1.4.0=058d3bf, v1.5.0(→653362), v1.5.1(→00794fb), v1.5.2(→1f2b605), pre-restyle(→1f2b605), **v1.6.0(→8324f27) (pushed during audit).** → **FLAG:** gitflic mirror is **missing v0.9.0-baseline and v1.0.0.**

submodules/constitution: v1.0.0=afead29 (^{}=19af087); git describe=v1.0.0-28-g38c9825.

design-toolkit: v0.2.0=22b6b2d (^{}=13a76eb), v0.2.1=ba55f5f (^{}=74a037f).

3. Submodule pointer consistency

Umbrella committed gitlinks (git ls-tree HEAD): design-toolkit=74a037f, milosvasic.ru=00794fb, vasic.digital=e2f85bc, submodules/constitution=38c9825.

- design-toolkit 74a037f → equals remote main tip & v0.2.1^{ } → **reachable, not dangling.**
- submodules/constitution 38c9825 → equals remote main tip → **reachable, not dangling.**
- milosvasic.ru 00794fb → equals remote v1.5.1^{ } → reachable but **STALE** (site now at v1.6.0/8324f27).
- vasic.digital e2f85bc → equals remote v1.5.0^{ }/pre-restyle^{ } → reachable but **STALE** (site now at v1.6.0/d87a1d6).

No dangling pointers. The two site pointers lag because the deploy's umbrella-side gitlink bump is not yet committed (working tree shows M milosvasic.ru, M vasic.digital).

4. Constitution governance

origin/main:Constitution.md contains **§11.4.236 (×2)** and **§11.4.237 (×4)** (also §11.4.162 ×21). Constitution's origin/main:.gitmodules nests design-toolkit (→ vasic-digital/design-toolkit.git) alongside token_optimizer, session_orchestrator, continuum, anti_bluff, helix_perf_cache. **PASS.**

5. Live sites

- <https://vasic.digital/> → **HTTP 200**, 47384 B, server: GitHub.com, **no generator meta** (custom Pages workflow), last-modified: Fri, 07 Aug 2026 14:50:15 GMT.
- <https://milosvasic.ru/> → **HTTP 200**, 38193 B, server: GitHub.com, generator content="Jekyll v4.4.1", last-modified: Fri, 07 Aug 2026 14:50:15 GMT.
- **v1.6.0 re-style deploy IN PROGRESS.** last-modified was identical before and after the v1.6.0 push → the currently served content is the pre-v1.6.0 build. Re-style **not asserted live** (UNVERIFIED, as instructed).

6. Secrets hygiene

- **umbrella:** robust coverage (.mcp.json, .env, *.env, .env.*, api_keys.sh, **/api_keys.sh, secrets.sh, **/secrets.sh) — **PASS**.
- **constitution:** covers .env variants, whitelists .env.example/.sample/.template. .mcp.json not ignored; plugins/scheduled-work/.mcp.json is tracked but contains **0** real-secret values — **PASS (minor)**.
- **vasic.digital:** no tracked .gitignore — **FLAG**.
- **design-toolkit:** no tracked .gitignore — **FLAG**.
- **milosvasic.ru:** .gitignore present but .env is **commented out** (# .env); no .mcp.json/api_keys rule — **FLAG**.
- **Leaked real keys: 0** across all repos. Sole pattern hit = submodules/constitution/scripts/hooks/test_credential_scan_lib.sh (scanner test fixture — benign). No secret values were printed at any point.

7. Loose ends

- **Uncommitted work — umbrella only, all re-style-related (NOT stale):** modified _tests/evidence/visual-effects/*.png (6 files), _tools/gen/build.sh, design-system/brand-milosvasic/milosvasic.css, design-system/brand-vasic-digital/vasic-digital.css, plus submodule-pointer moves M milosvasic.ru, M vasic.digital. Untracked: _tests/evidence/{closure-final,content-quality-43,restyle}/, design-system/brand-vasic-digital/fonts/. All consistent with the active v1.6.0 re-style.
 - **Other repos clean:** vasic.digital, milosvasic.ru, constitution, design-toolkit working trees = 0 changes at measurement.
 - **No untracked files >5MB.**
 - **No detached-HEAD submodules** (all on main).
 - **design-system/** is a **tracked subdirectory of the umbrella** (no nested .git, not in .gitmodules) — not an orphan repo. Not a defect; noted for clarity.
-

Issues found

1. **[FLAG] milosvasic.ru origin remote has split/asymmetric URLs** — `fetch=github.com/milos85vasic/milosvasic.ru`, `push=gitflic.ru/...` + a second `push=github.com/...net.v2`. Non-standard multi-push config; confirm intentional (risk: pushes fan out to mirrors, fetch from a different host).
2. **[FLAG] milosvasic.ru gitflic mirror missing tags** — `v0.9.0`-baseline and `v1.0.0` present on github+gitlab but absent on gitflic (tag drift between mirrors).
3. **[FLAG] vasic.digital has no tracked .gitignore** — no repo-level secret coverage (relies solely on umbrella-level ignore).
4. **[FLAG] design-toolkit has no tracked .gitignore** — same secret-coverage gap.
5. **[FLAG] milosvasic.ru .gitignore does not ignore .env** — the `.env` rule is commented out; no `.mcp.json/api_keys` rules either.
6. **[FLAG/INFO] Umbrella submodule pointers for both sites are stale** — records `v1.5.1/v1.5.0` while sites advanced to `v1.6.0`; the umbrella gitlink bump + commit is still pending (expected mid-deploy, but must be committed to finish the release).
7. **[UNVERIFIED/INFO] v1.6.0 re-style not confirmed live** — `v1.6.0` pushed to both site remotes during the audit, but served `last-modified` is unchanged (pre-`v1.6.0` build still served); Pages rebuild pending. Not a defect at time of audit, just incomplete.
8. **[INFO] constitution tracks plugins/scheduled-work/.mcp.json** — contains no real secrets, but tracking `.mcp.json` at all is inconsistent with the umbrella policy of ignoring it; review whether it should be tracked.

No dangling submodule pointers, no leaked real secrets, no detached submodules, no stale non-restyle uncommitted work, no oversized untracked blobs.
