

report

Performance Audit — vasic.digital & milosvasic.ru (v1.7.1)

Tool: **Lighthouse 12.8.2** (system Chrome, headless), mobile + desktop; supplementary curl. Raw artifacts (*.report.json / *.report.html / *.log) alongside this file. Audit only.

Scores

Site	Page	Form	Perf	SEO	BP
vasic.digital	Home	Mobile	96	92	96
vasic.digital	Home	Desktop	100	92	96
vasic.digital	Product	Mobile	98	100	96
vasic.digital	Product	Desktop	100	100	96
milosvasic.ru	Home	Mobile	99	92	96
milosvasic.ru	Home	Desktop	100	92	96
milosvasic.ru	Product	Mobile	99	100	96
milosvasic.ru	Product	Desktop	90	100	96

Both sites already excellent. CWV all “good” except **mv-product desktop CLS 0.208**.

Prioritized fixes

Quick wins 1. /favicon.ico 404 on every page — the sole console error → BP 96→100 both sites. 2. mv-product desktop **CLS 0.208** — article.od-product-detail.od-reveal scroll-reveal animates layout; drive via transform/opacity only → Perf 90→~100. 3. 23× non-descriptive “READ MORE” links on both homepages → SEO 92 (product pages 100). Add descriptive aria-label → SEO 92→100 + a11y. 4. Delete orphaned Assets/Logo.jpeg (531 KiB) —

referenced in source but browser loads the 3 KiB logo.webp (network trace confirms it's NOT a live cost; latent repo bloat only).

Medium 5. Render-blocking CSS (5-6 serial <head> sheets): ~870-900 ms mobile on vasic home/product; drop mv's redundant 6th sheet if any; inline critical CSS. 6. Preload the two critical fonts (Inter-latin + display) → shorter swap / faster mobile LCP.

Low/optional: minify CSS/JS (~5 KiB); brotli/cache-TTL are GH Pages platform limits (need a CDN — not worth it at current weights).

Fonts: all font-display: swap (no FOIT). Images: responsive srcset + width/height + fetchpriority on mv hero (well done). Every number traces to a captured Lighthouse artifact; single run per config (mobile SI $\pm \sim 10\%$ noise).
