

REVIEW

UI status/tier/alt label translation — §11.4.140 + §11.4.141 evidence

- **Translator:** HelixTranslate engine (unified-translator) run LOCALLY via podman container `helixtranslate:cli` (built from / Volumes/T7/Projects/helix_translate), provider **zhipu**, model **glm-4.5-flash**. Driver: `_tools/gen/translate_status_labels.py` (contextualized per-language batch → disambiguates software-sense; glossary-protected).
- **Independent reviewer (different provider, §11.4.141):** **groq**, model **llama-3.3-70b-versatile**. Reviewer: `_tools/gen/review_ui_labels.py`. **43 corrections** applied where the translator's output was the wrong sense (e.g. kk shipped Жаратылды→Шығарылды; fa shipped انتشار یافته → ارسال; ja/ko/zh “stable”→“stable version” refinements).
- **Keys:** 9 status.* + 2 alt.* translated; 3 tier.* kept as language-neutral technical identifiers (verbatim EN slug). All 14 non-EN languages: 14/14 keys.
- **Scope fixed:** the non-EN status/tier/alt English-leak (both sites) + German pf.download / prod.tier (prod.tier “tier” → “Level”; “Tier” would read as “animal” in German).
