

batch1-overlays

You are OpenDesign extending an existing, production design system. Output a SINGLE valid CSS fragment and NOTHING else — no HTML, no Markdown, no commentary, no code fences, no `:root` token block (tokens already exist).

CONTEXT — the following OpenDesign tokens are ALREADY declared by the brand stylesheet and are the ONLY colors/values you may use. Never invent a color, never hardcode a hex/rgb; every color MUST be a `var(-od-*)`. Use spacing/radius/shadow/motion tokens for sizing wherever a token applies; only use a bare structural pixel (1px/2px borders, small control dimensions) where NO token can apply, exactly like the base system does.

Available tokens: - Color: `-od-bg`, `-od-surface`, `-od-surface-2`, `-od-text`, `-od-text-muted`, `-od-border`, `-od-accent`, `-od-accent-hover`, `-od-accent-active`, `-od-on-accent`, `-od-focus`, `-od-success`, `-od-warning`, `-od-danger`, `-od-accent-50..900`, `-od-shadow-color`. - Type: `-od-font-display/-body/-mono`; `-od-fs-xs..3xl`; `-od-lh-tight/-normal/-loose`; `-od-tracking-tight/-normal/-wide`. - Space: `-od-space-1..12`. Radius: `-od-radius-sm/-md/-lg/-xl/-pill`. Shadow: `-od-shadow-sm/-md/-lg`. - Motion: `-od-dur-fast/-base/-slow`, `-od-ease-standard/-emphasized`. Z: `-od-z-nav/-modal/-toast`.

RULES: 1) Every class prefixed `od-`. Correct in BOTH light and dark purely by inheriting the tokens above (do NOT write any dark-theme override — the tokens flip themselves). 2) Interactive elements get a visible `:focus-visible` ring: `outline: 2px solid var(--od-focus)`; `outline-offset: 2px`; 3) WCAG 2.2 AA text contrast. CRITICAL: the toast is a NEUTRAL `-od-surface` panel — its ONLY colored part is the left accent border and the icon. ALL toast text MUST stay on the neutral surface: use `var(--od-text)` for titles and `var(--od-text-muted)` for the message. NEVER set a literal text color and NEVER use `-od-on-accent` for toast text (those would fail contrast in one theme). Per variant, change ONLY `border-left-color` and the `od-toast__icon { color: <semantic token> }` — do not touch text color. 4) End with a single `@media (prefers-reduced-motion: reduce)` block neutralizing this batch's transitions/animations. 5) Provide hover / active / selected / disabled states and ARIA-friendly hooks (e.g. `[aria-selected]`, `[aria-disabled]`, `[hidden]`, `[role="menu"]`).

GENERATE these components (this batch = OVERLAYS): - od-toast (notification): container od-toast (-od-surface fill, -od-text title, -od-text-muted message), region od-toast-region (fixed stack, top/bottom, gap, z = -od-z-toast), od-toast__icon, od-toast__body, od-toast__title, od-toast__msg, od-toast__close. Variants od-toast--success, od-toast--warning, od-toast--danger, od-toast--info (info uses -od-accent) change ONLY the left border-left-color and od-toast__icon color to the matching semantic token (-od-success/-od-warning/-od-danger/-od-accent). Text color is NEVER overridden. - od-menu / dropdown: od-menu (surface panel, border, radius, shadow-lg, padding), od-menu__item (hover/focus background -od-surface-2, [aria-disabled] dimmed), od-menu__separator, od-menu__label (mono eyebrow), od-menu[hidden] hidden. A od-dropdown wrapper (position:relative). - od-select: styled od-select wrapper + .od-select__control (looks like od-input) with a chevron via .od-select__chevron; open state [aria-expanded="true"]. Reuse input look from tokens. - od-tooltip: od-tooltip (position:relative host) + od-tooltip__bubble (absolute, surface-2/inverse, small, radius, shadow, opacity+transform transition, appears on :hover/:focus-within of host), with [data-placement] top/bottom. - od-popover: od-popover panel (surface, border, radius-lg, shadow-lg, padding-6, max-width), od-popover__arrow, od-popover__title, od-popover__body, [hidden] hidden. - od-fab (floating action button): od-fab (fixed bottom-inline-end, circular via radius-pill, accent fill, on-accent icon, shadow-lg, hover-lift via transform, active). od-fab--sm variant.

Output only the CSS for these components plus the reduced-motion block. Begin directly with a `/* OVERLAYS */` comment.

STRICT TOKEN LIST — the ONLY surface tokens are -od-surface and -od-surface-2 (there is NO -od-surface-3). There is NO -od-border-hover (for a hover border use -od-text-muted or -od-accent). There is NO -od-fs-md (the scale is xs, sm, base, lg, xl, 2xl, 3xl). Do NOT reference any custom property that is not in the Available tokens list above.
