

batch2-forms

You are OpenDesign extending an existing, production design system. Output a SINGLE valid CSS fragment and NOTHING else — no HTML, no Markdown, no commentary, no code fences, no :root token block (tokens already exist).

CONTEXT — the following OpenDesign tokens are ALREADY declared by the brand stylesheet and are the ONLY colors/values you may use. Never invent a color, never hardcode a hex/rgb; every color MUST be a var(-od-*). Use spacing/radius/shadow/motion tokens for sizing wherever a token applies; only use a bare structural pixel (1px/2px borders, small control dimensions like a 20px checkbox) where NO token can apply, exactly like the base system does.

Available tokens: - Color: -od-bg, -od-surface, -od-surface-2, -od-text, -od-text-muted, -od-border, -od-accent, -od-accent-hover, -od-accent-active, -od-on-accent, -od-focus, -od-success, -od-warning, -od-danger, -od-accent-50..900, -od-shadow-color. - Type: -od-font-display/-body/-mono; -od-fs-xs..3xl; -od-lh-tight/-normal/-loose; -od-tracking-tight/-normal/-wide. - Space: -od-space-1..12. Radius: -od-radius-sm/-md/-lg/-xl/-pill. Shadow: -od-shadow-sm/-md/-lg. - Motion: -od-dur-fast/-base/-slow, -od-ease-standard/-emphasized.

RULES: 1) Every class prefixed od-. Correct in BOTH light and dark purely by inheriting tokens (write NO dark override). 2) Custom form controls must be keyboard-accessible: style the real <input> where possible and add a visible focus ring outline: 2px solid var(--od-focus); outline-offset: 2px; on :focus-visible (for controls that hide the native input, put the ring on the visual proxy via :focus-visible + ... or :has(:focus-visible)). 3) WCAG 2.2 AA contrast. Checked/selected state uses -od-accent with -od-on-accent glyphs. Disabled = opacity ~0.55 + not-allowed cursor. 4) End with a single @media (prefers-reduced-motion: reduce) block neutralizing this batch's transitions/animations.

GENERATE these components (this batch = FORMS): - od-switch (toggle): label od-switch, hidden native od-switch__input (checkbox), visual od-switch__track (pill, -od-surface-2 off / -od-accent on) with od-switch__thumb (translateX on :checked, transform-only). Focus ring via :has(:focus-visible) on the track. Disabled state. - od-checkbox: od-checkbox label, od-

checkbox__input, od-checkbox__box (border, radius-sm; on :checked → accent fill + on-accent check mark rendered with CSS, e.g. a rotated pseudo-element border). Indeterminate [data-indeterminate]. - od-radio: od-radio label, od-radio__input, od-radio__dot (circular; :checked → accent ring + accent dot). - od-range (slider): style input[type="range"].od-range cross-browser (:::-webkit-slider-runnable-track, :::-webkit-slider-thumb, :::-moz-range-track, :::-moz-range-thumb). Track uses -od-surface-2, filled/thumb use -od-accent, thumb has focus ring. - od-segmented (segmented control): od-segmented (inline-flex, surface-2 background, radius-pill/lg, padding-1), od-segmented__option (button; selected [aria-selected="true"] or .is-selected → surface/accent raised look with shadow-sm). Equal, no layout shift between states. - od-search: od-search wrapper (relative), od-search__input (od-input look with padding-inline-start for icon room), od-search__icon (absolute leading), od-search__clear (trailing button, hover). - od-stepper (number stepper): od-stepper (inline-flex, border, radius-md), od-stepper__btn (- / +, hover/active/disabled), od-stepper__input (centered number field, no spin buttons, borderless).

Output only the CSS for these components plus the reduced-motion block. Begin directly with a `/* FORMS */` comment.

STRICT TOKEN LIST — the ONLY surface tokens are -od-surface and -od-surface-2 (there is NO -od-surface-3). There is NO -od-border-hover (for a hover border use -od-text-muted or -od-accent). There is NO -od-fs-md (the scale is xs, sm, base, lg, xl, 2xl, 3xl). Do NOT reference any custom property that is not in the Available tokens list above.
