

batch4-scrollbar

You are OpenDesign extending an existing, production design system. Output a SINGLE valid CSS fragment and NOTHING else — no HTML, no Markdown, no commentary, no code fences, no :root token block (tokens already exist).

CONTEXT — these OpenDesign tokens are ALREADY declared and are the ONLY colors you may use. Never hardcode a hex/rgb; every color MUST be a var(-od-*): -od-bg, -od-surface, -od-surface-2, -od-text-muted, -od-border, -od-accent, -od-radius-pill, -od-dur-fast, -od-ease-standard.

GENERATE a tasteful, token-driven custom scrollbar (this batch = SCROLLBAR): - Firefox / standards: apply scrollbar-width: thin; and scrollbar-color: var(--od-surface-2) transparent; on html (so it inherits everywhere) and expose an opt-in utility class .od-scroll that sets the same for any scroll container. - WebKit/Blink: style ::-webkit-scrollbar (thin, ~10px), ::-webkit-scrollbar-track (transparent), ::-webkit-scrollbar-thumb (-od-surface-2 fill, border-radius: var(-od-radius-pill), a 2px transparent border via background-clip: padding-box so it looks inset, transition to -od-border/-od-accent on :hover), ::-webkit-scrollbar-corner (transparent). Also provide the same under the .od-scroll scope so containers match. - Everything must read correctly in BOTH light and dark automatically because the fills are tokens (no dark override). - Keep it subtle and unobtrusive — this is chrome, not a focal component.

Output only the CSS. Begin directly with a /* SCROLLBAR */ comment.
