

authored-document

Contract — The authored content format

workshop/curriculum/learning/NN-<slug>.json — one curriculum-kit Document per authored area.

Identity

NN- is a **sort key only**. **Identity is the area's taxonomy ULID inside the file**. An authored document binds itself to an extracted area, so there is no mapping table to maintain and a rename orphans nothing.

Strictness

Decoded with DecodeDocument, which **rejects unknown fields**.

This is the load-bearing property. A misspelled key otherwise drops its material **silently**, and a lesson quietly missing a diagram is indistinguishable from a lesson that never had one. Failing loudly at load is worth the strictness — so **write one file and prove it decodes before writing the rest**.

Absence states

Condition	Response
catalogue not configured	a determined no_learning_catalog
catalogue unreadable	503

“Not configured” is a known state; “cannot read” is a fault. Collapsing them would report a missing flag as a broken server.

Content obligations

- Lessons carry title, ord, body, estimated_minutes.
- The **required** lesson set may be a proper subset of the lessons.
- Materials carry kind from the closed vocabulary, a caption, and a text alternative conveying **content**, not a file name.
- Video anchors carry chapter, measured start, optional end, and a transcript anchor that resolves.
- An assessment declares pass_percent and its required lessons.

The honest-absence rule

An area may have lessons and **no assessment**. Where no authored question bank exists, the area carries none and says so. **A fabricated question bank is worse than a missing one** — it is a test a learner can fail for the wrong reason.

Currently: 5 authored senior banks against **37** areas. The other 32 are not to be padded to make the numbers match.
