

session-record

Contract — The session record

Four sections per chapter, cumulative, with derived carry-forward.

Two surfaces, ONE derivation

Surface	Shape
GET /api/chapters/{id}	a session_record key carrying everything
GET /api/chapters/{id}/{open-questions,todo,next-meeting}	one section each, for deep-linking

Both read pkg/sessionrecord. Neither re-derives. A gate asserts they serve the same items — **a route and a key that agree today are exactly what drift**, and this platform has the 819-vs-817 catalogue bug to prove it.

meeting-notes is deliberately NOT built

Its withholding rule **may not be guessed**: one note is a content judgement left undecided for the operator. **A route built on a guessed withholding rule publishes a judgement nobody made** (FR-005a). Its DEBT row names that specific blocker rather than the general one.

Section shape

```
own_state    authored | empty
own_count    items originating in THIS session
carried_count items arriving from earlier sessions
```

items[] both
reason REQUIRED when own_state is empty

An empty section and an unwritten section are never indistinguishable (FR-004). Two sections currently carry own_count=0 with an authored reason; without the split they would read as productive sessions.

Item shape

origin_chapter (FR-003) · slip_count (FR-010) · marker: CARRIED-FORWARD (FR-009) · marker_label e.g. CARRIED-FORWARD x2.

Open questions keep the three-valued resolution the client already types: answered_in_chapter / answered_by_research / unanswered. **The wire must not narrow it** — the consumer already knows what it needs.

Plan and carry-forward

plan(N) = unresolved(plan(N-1)) with slip+1 + next-meeting points of N-1

- Every planned point resolves to **covered / carried / dropped-with-reason**.
- **vanished is 0 by construction** — Resolve has no fourth branch.
- **A drop without a reason is refused and carries instead.**
- basis: undetermined ⇒ **no coverage percentage is computed**.
Chapter 01 has no predecessor; a percentage over an invented plan is a fiction with a denominator.
- The latest chapter's carry-forward is an **outbox** (is_outbox: true) with a stated reason (FR-011).

Coverage is proposed, never asserted

coverage_state stays **undecided** until a human confirms. A proposal carries per-point evidence, confidence and status: PROPOSED. **A draft must not move a published figure** (FR-007a, I4) — and a check asserts the served state is still undecided after a proposal exists.

Measured

39 chapters' worth of items across 3 chapters: 12 of 12 sections present, **0 empty-without-reason**, 436 items, 210 carried, max_slip=2, one outbox of 42. Plan: 66 planned · 0 covered · 66 carried · 0 dropped · **0 vanished**.

Asserted by

verify-session-record.sh rc 0 · prove-session-record.sh 14 passed, including a control that goes green, a vacuity refusal exiting 2, a duplicate planned point caught as rc 1, and a reasonless drop refused.
