

plan

Implementation Plan: A Complete Session Record per Chapter, and a Platform a QA Team Can Test

Branch: `main` (this repository works on `main` only) **Date:** 2026-09-08
Spec: [spec.md](#)

Summary

Two deliverables, one goal: every chapter carries a complete, served session record whose carry-forward is derived rather than maintained; and the platform reaches a state a QA team can test manually and a client can be shown, with every claim traceable to machine-produced evidence.

Most of this is built. It landed during the session that specified it, from eleven parallel streams, and was proven on the wire after a rebuild and restart. This plan therefore records **what is done and how it was verified, what is done but unverified, and what remains** — because a plan that re-proposed finished work would hide the four items that actually need attention.

The approach in one line: one derivation per fact, one place each rule lives, and a gate for every claim — with the gate's *population* justified before its count is read.

Technical Context

Language/Version: Go 1.26.2 (backend), TypeScript/Angular (frontend), Python 3 (curriculum pipeline), Bash (gates) **Primary Dependencies:** submodules/curriculum-kit (published PUBLIC this session, now carrying Lesson.Body), the passage registry, pkg/sessionrecord, pkg/learning **Storage:** Files — authored content as JSON under curriculum/learning/, session-record inputs as JSONL under curriculum/chapter-<slug>/knowledge/, progress session-keyed under the index volume, SQLite+FTS for search **Testing:** Go go test, Playwright e2e, Angular unit specs, Bash three-valued gates each with a data-driven prove-* mutation battery, Python unittest **Target Platform:** Linux container via podman on 127.0.0.1:8087; frontend served from a bind-mounted platform/web **Project Type:** Web service + SPA + content pipeline inside a PRIVATE module under a PUBLIC umbrella **Performance Goals:** A learner completes catalogue → area → lessons → gated test → scored result with no step reporting not-found. Cross-reference derivation over the full corpus is a 45-minute background job and is reported as could-not-determine while it runs. **Constraints:** No content crosses the private/public boundary. Every gate three-valued; a 2 is never a pass. No history rewriting. No CI — enforcement is a local pre-push hook. **Scale:** 3 chapters · 42 authored areas (39 served, 3 held back) · 318 served lessons · 27 areas with a test · 205 graded questions · 24,929 passages · 498,580 cross-reference edges

NEEDS CLARIFICATION: none. Four were closed in [spec.md § Clarifications](#), each against a measurement. One **operator decision remains open and is tracked as a blocker**, not as an unknown: the meeting-notes withholding rule (FR-005a).

Constitution Check

GATE: must pass before proceeding. Re-checked after design — second table below.

The constitution was amended to **1.3.0** this session, adding four principles **each derived from a measured failure of this project today**. The first four rows below are those new principles, and this feature is the reason they exist.

Principle	Status	Evidence
Source Is Not Served (<i>new</i>)	PASS	This feature's own spec committed the

Principle	Status	Evidence
		violation and records it: a baseline row read the on-disk catalog (30 areas / 224 questions) while the wire served 14 / 116. FR-026 now requires every claim to state which population it measured. All post- rebuild figures here are wire measurements.
A Snapshot Licenses Only Itself <i>(new)</i>	PASS	The defect that produced the false “no test exists” claim. Staleness is now four-valued; a stale catalog returns 503 naming the changed files. FR-026a.
A Gate’s Population Is Part of Its Claim <i>(new)</i>	PASS	Three defects this session were instruments aimed at the wrong set. Every new gate here states its population, and each ships a vacuity refusal exiting 2.
An Exemption Is a Claim That Can Expire <i>(new)</i>	PASS	A registry exemption said “it judges nothing” of a script that had gained a verdict. Re-validated and corrected.
Evidence-Based Claims	PASS	Every figure is a captured run. The three unverified items are named in

Principle	Status	Evidence
		<i>Known gaps, not omitted.</i>
Honest Instruments	PASS	Every new gate is three-valued with a data-driven paired proof, a control that goes green, and a vacuity refusal.
Governance Fidelity	PASS	Cascade rc 0; C9 13 MATCH / 0 DRIFT after two failures this session, both self-inflicted and both recorded.
Isolation by Default	PASS	curriculum-kit is now a published repository with a real pin, not a plain directory.
Comprehensive Documentation	NEEDS ATTENTION	The QA and client documents exist but describe the pre-rebuild product. Regeneration is in flight (FR-020a).
Environment Adaptability	PASS	No absolute host path introduced; one pre-existing violation fixed this session and the pre-push hook now catches the class.
Authored Curriculum	PASS	12 areas honestly carry no test; none was fabricated to raise a count.
Published Means Served	PASS	Every claim in this plan was re-measured after rebuild and restart.

Principle	Status	Evidence
Derived Presentation	PASS	7 hue families against a floor of 6, measured on the served bundle with a stability bracket.
Standalone Cloneable	NEEDS ATTENTION	2 gaps remain in the module's own check; the archive-fetch mechanism is deliberately not yet invented (TODO(storage-fetch)).
Quality Over Speed	PASS	3 documents stay unpublished on uncited claim blocks; the retrieval benchmark stays red rather than have its ground truth rewritten.

No violations. Two need attention, both in flight or blocked on an operator decision.

Structure Decision: one derivation per fact. pkg/sessionrecord owns the record's rules and both the embedded chapter key and the standalone routes read it. AreaPublicationOf owns publication. curriculum-kit owns the content shape and knows nothing about this project. **A second implementation that agrees today is this platform's recurring defect** — it produced the 819-listed-vs-817-openable catalogue bug — so every surface consumes, never re-derives.

Execution Strategy

TDD Requirements

The publication decision — the pair assertion (TestAreaListAndDetailAgree) is the test that had to exist; both handlers had passing tests while disagreeing.

Assessment gating and answer-key non-disclosure — 17 mutations; the load-bearing one opens the gate on *any* lesson completing and is caught by exactly one assertion.

Bank-to-area reachability — the population check that was missing; 89 questions were unreachable while a mountedness check passed.

Lesson body presence — two arms: in-process (339/339) and live (318/318). The live arm was **red before the rebuild** and is the red baseline on the broken artefact.

Session-record derivation — 16 corpus mutations; vanished=0 holds by construction because Resolve has no fourth branch.

The three new session-record routes — must assert they serve the *same* items as the embedded key. A route and a key that agree today are what drift.

The coverage proposal's non-authority — a check asserting `coverage_state` is still undecided after a proposal exists. This is what makes FR-007a mechanical rather than aspirational.

Parallel Execution Opportunities

Eleven streams ran concurrently with disjoint file sets. The partition is recorded because it is reusable — and because its one failure is instructive.

Stream	Owns
Content authoring	docs/training/, curriculum/, pipeline/
Backend	platform/backend/, platform/gates/
Frontend	platform/frontend/src/app/
Theming	platform/frontend/src/styles/
QA documents	docs/qa/

The partition held; the *timing* did not. A frontend stream measured a stylesheet a theming stream was mid-rewrite of, and a build id was computed over an orphaned file a `cp -a` had left behind. **Any stream measuring another's output must rebuild immediately before measuring and state which build it read.**

Human Checkpoints

1. **The meeting-notes withholding rule** — blocks one route. A route built on a guessed rule publishes a judgement nobody made.
2. **The coverage proposal** — a draft is not a decision; the served figure must not move until confirmed.
3. **The 3 held-back documents** — 62, 54 and 58 uncited claim blocks. They stay unpublished until read.
4. **Before any restart** — it invalidates every prior measurement and triggers a 45-minute cross-reference derivation.

Review Gates

The publication decision — every surface consumes it.

The answer-key projection — built as a map with **no answer field at all**, so no future upstream field can leak by defaulting to present.

The session-record route contract — reviewed before the components consume it.

Known gaps — what is NOT done, and what is done but unverified

In flight:

1. Three session-record routes (open-questions, todo, next-meeting).
2. QA and client documents regenerating against the current build.
3. The coverage proposal, bounded so it cannot move a served figure.

Blocked on an operator decision:

1. `/api/chapters/{id}/meeting-notes` — the withholding rule may not be guessed.
2. The 3 held-back area documents.
3. The archive-fetch mechanism — `extract-videos.sh` returns rc 2 with `TOD0(storage-fetch)` naming the four missing pieces.

Done but not verified as served:

1. Every score is determinate: false because all banks mix machine-marked and free-text questions. Verified pre-rebuild; needs re-measuring.

2. /api/health carries no build id — which is exactly why nothing noticed the container was four hours older than the code.

Correctly red, and must stay so:

1. The retrieval benchmark fails on three rows naming areas the search surface is **contractually forbidden** to return — dead ground truth from a superseded catalogue.
2. Two module gates report COULD-NOT-RUN with recorded reasons and named lifting authority.
3. The content-boundary gate: 1,933 class-A inward rows judged, **0 disclosures**, and it stays red by design.

Post-design Constitution re-check

Principle	Before	After	Change
Source Is Not Served	PASS	PASS	The contracts state which population each figure came from.
A Snapshot Licenses Only Itself	PASS	PASS	Unchanged.
A Gate's Population Is Part of Its Claim	PASS	PASS	The route contract's pair assertion is a population check by construction.
An Exemption Is a Claim That Can Expire	PASS	PASS	Unchanged.
Comprehensive Documentation	NEEDS ATTENTION	NEEDS ATTENTION	Regeneration in flight; not resolvable by design work.
Standalone Cloneable	NEEDS ATTENTION	NEEDS ATTENTION	Unchanged; the fetch mechanism awaits storage details.

Principle	Before	After	Change
All others	PASS	PASS	Unchanged.

No gate failed. No unresolved clarification remains. Ready for /
speckit-tasks.
